CONTENTS

1. Marks in the parts list 記号説明

(1) Standard mechanical elements 標準機械要素

Mark 記号	Shape 形状	Name 名称	Mark 記号	Shape 形状	Name 名称
JCIS ⊕ PM		JCIS Pan Head Machine Screw JCIS十字穴付きなべ小ねじ	HS		Hexagon Socket Head Set Screw 六角穴付き止めねじ
JCIS ⊕ CM		JCIS Countersunk Head Machine Screw JCIS十字穴付きさら小ねじ	HSB		Hexagon Socket Head Bolt 六角穴付きボルト
JCIS ⊕ OCM		JCIS Oval Countersunk Head Machine Screw JCIS十字穴付き丸さら小ねじ	(45°)P		Oval Countersunk Head Special Machine Screw すりわり付き特殊丸さら小ねじ
⊕ PM		Pan Head Machine Screw 十字穴付きなべ小ねじ	(45°)Q		Countersunk Head Special Machine Screw すりわり付き特殊さら小ねじ
⊕ CM		Countersunk Head Machine Screw 十字穴付きさら小ねじ	⊕ PTB		Pan Head Tapping Screw Type B 十字穴付きなべタッピンねじB
⊕ OCM		Oval Countersunk Head Machine Screw 十字穴付き丸さら小ねじ	⊕ CTB		Countersunk Head Tapping Screw Type B 十字穴付きさらタッピンねじB
⊕ RM		Round Head Machine Screw 十字穴付き丸小ねじ	⊕OCTB		Oval Countersunk Head Tapping Screw Type B 十字穴付き丸さらタッピンねじB
⊕ TM		Truss Head Machine Screw 十字穴付きトラス小ねじ	⊕ PT		Pan Head Tapping Screw 十字穴付きなべタッピンねじ
SR		Set Screw Round Point すりわり付き止めねじ丸さき	⊕ CT		Countersunk Head Tapping Screw 十字穴付きさらタッピンねじ
SC		Set Screw Cone Point すりわり付き止めねじとがりさき	⊕ OCT		Oval Countersunk Head Tapping Screw 十字穴付き丸さらタッピンねじ
SH		Set Screw Half Point すりわり付き止めねじくぼみさき	N		Hexagon Nut 六角ナット
TP		Taper Pin テーパピン	SPP		Spring Pin スプリングピン
STP		Straight Pin 平行ピン	E		E-ring E型止め輪

Expression 表 示 法

☆ Standard screw 標準ねじ

Mark, Diameter × Pitch × Length, Type or Mark, Diameter × Length, Type
記号 ねじの呼び径 ピッチ 長さ 種別 又は 記号 ねじの呼び径 長さ 種別

Ex. ⊕ RM 3×0.5×4 JCIS ⊕ PM 2×2.5 Type (3)

☆ Pin ピ ン

Mark, Diameter × Length
記号 呼び径 長さ

Ex. TP 2×12

☆ Nut ナ ッ ト

Diameter of internal thread, Mark-Type
ねじの呼び径 記号 種別

Ex. 8N-Type (3)

☆ E-ring E型止め輪

Mark-Diameter
記号 呼び径

Ex. E-8

(2) The term of sale column 販売区分欄

Mark 記号	Explanation 説明	
○	Can be supplied individually	単独部品として販売するもの
△	Not supplied individually but only as subassembly	部組品でなければ販売しないもの
○△	Supplied either as part or subassembly	単独部品でも部組品でも販売するもの
×	Not considered as repair part	修理部品とは考えないもの
※	Should be sent to the factory if the repair is needed	単体では交換できないので、組む場合に工場での加工が必要なもの
◙	Delivered as a product from the sales department (i.e., not supplied as repair part)	商品として販売店で販売しているもの (修理部品扱いはしない)

(3) The remarks column 備 考 欄

S-0001	Part number used in common	共通部品番号
D-2222	Part number in stock	貯蔵品番号
51F1001	Technical data sheet number	製品技術資料番号
-1×100/1000	Starting order	実施オーダー
Rev.	Revision	訂 正
Add.	Addition	追 加
Dis.	Discontinuation	廃 止
#1-#3	Relative parts number	関係部品番号

2. Lubricant and binding agent list 潤滑剤・接着剤一覧表

LUBRICANTS 潤滑剤

Oil 油	Usage 用途	Items number 番号	Items 商品名 Japanese 日本	Remarks 備考
Liquid oil 液体油	At a normal temperature 常温用	L 1212	日本石油 白スピンドル油 №5

3. PARTS AND SUBASSEMBLY LIST

Note: These lists give the numbers of the drawings to be refered to identify the shapes of the parts, subassemblies and their positions in which they are used.

These lists cover only the parts and subassemblies available for repairing. Please make sure of the numbers of the parts and subassemblies, referring to the succeeding Exploded Drawings and Parts List.

Part No. 部品番号	Name 名　称	Pcs. Per Unit 1台分個数	Reference Fig. No. 参照図番	Common Part No. 共通部品番号	Remarks 備　考
9	Eypiece glass clip 接眼ガラス押えバネ	1	1	32FB-#392	
10	Tripod socket 三脚座	1	14		
13	Sync socket cap ターミナルキャップ	1	6	32FB#15A	
15	Sync socket シンクロソケット	1	6	S-8504	
26	Blank shot check lever 空撮り防止レバー	1	13		
28	MD signal lever axle MD信号レバー軸	1	13		
29	Collar 空撮り防止レバー軸カラー	1	13		
30	Spring MD信号レバーバネ (d=0.26)	1	13		
31	Bottom retaining plate 底部押え坂	1	14		
39	Shoulder cover, right 前板右肩カバー	1	9		
40	Shoulder cover, left 前板左肩カバー	1	9		
46A	Battery chamber label 電池貼マーク	1	14		
	電池ホルダー	1	14		
50	Roller ローラー	1	16		
51	Roller shaft ローラー軸	1	16		
52	Lead wire cover コード溝カバー	1	13		
53	Front plate hole cover 前板孔カバー	1	9		
54	Self-timer lever screw セルフレバービス	1	9		

Part No. 部品番号	Name 名称	Pcs. Per Unit 1台分個数	Reference Fig. No. 参照図番	Common Part No. 共通部品番号	Remarks 備考
55	Self-timer lever leatherette セルフレバー用皮	1	9		
56	Body leatherette A ボデー擬革A	1	16		
57	Body leatherette B ボデー擬革B	1	16		
58	Groove tightener A 溝用モルトプレン	1	16		
58A	Top groove tightener A 上溝用モルトプレン	1	16		
58B	Top groove tightener B 上溝用モルトプレンB	1	16		
59	Mirror box bottom sponge ミラーボックス下部モルト	1	11		
60	Etepiece bottom light-tight 接眼下部遮光モルト	1	13		
61	Mirror-up cushion sponge ミラーアップ受モルト	1	9	32FB-#345	
62	Shutter top cover シャッター上カバー板	1	13		
63	Shutter cushion rubber シャッター羽根受けゴム	1	13		
64	Shock abscrb rubber A 緩衝ゴムA	1	14		
65	Shoulder screw 前カバー用段ビス	1	8		
69	Shoe switch contact, upper 押え接点	1	1	31F3B-#571	
70	" , lower 受接点	1	1	31F3B-#572-1	
71	Collar Dカラー	1	1	31F3B-#573	
72	Contact washer 接点座金	1	1	31F3B-#574	
73	Switch plunger 押　棒	1	1	31F3B-#575	

Part No. 部品番号	Name 名称	Pcs. Per Unit 1台分個数	Reference Fig. No. 参照図番	Common Part No. 共通部品番号	Remarks 備考
74	Shoe washer シュー座金	4	1	31F3B-#576	
76	Sync socket nut シンクロ接点ナット	1	1		
78	Penta-prism cover leatherette ペンタ革	1	1		
79	Baffle plate 緩衝板	1	14		
80	Frcnt plate hole cover 前板穴カバー	1	9		
81	FRE insulator FREシート絶縁	1	1		
82	Shutter light-tightener シャッター遮光モルト	1	13		
83	Mirror box rear light-tight ミラーボックス後部モルト	1	9		
84	Light tight spong 遮光押えモルト	1	13		
85	Charge lever rubber シャッターチャージレバーゴム	1	14		
87	Retaining tape コード押えテープ	1	9		
100	Shutter シャッター	1	13		
103	Bypass capacitor バイパスコンデンサー	1	7		
104	FRE resistor FRE用抵抗	1	7		
105	FRE variable resistor FRE用調整抵抗	1	7		
106	FRE variable resistor FRE用調整抵抗	1	7		
107	Latch cutoff resistor A ラッチ防止抵抗A	1	7		
108	Latch cutoff diode ラッチ防止ダイオード	1	7		

Part No. 部品番号	Name 名称	Pcs. Per Unit 1台分個数	Reference Fig. No. 参照図番	Common Part No. 共通部品番号	Remarks 備考
109	Latch cutoff capacitor-A ラッチ防止コンデンサーA	1	7		
110	Latch cutoff capacitor-B ラッチ防止コンデンサーB	1	7		
111	Oscillation cut-off capacitor 発振止めコンデンサー	1	7		
112	Filter capacitor フィルター用コンデンサー	1	7		
113	Offset resistor オフセット用抵抗	2	7		
114	Offset adjust resistor オフセット調整抵抗	1	7		
117	Light emitting diode L E D	1	7,11		
118	Latch cutoff resistor B ラッチ防止抵抗B	1	7		
119	IC grounder pin IC アースピン	1	7

208	Bayonet spring バヨネットバネ	3	8	32FB-#208	
210	Coupling lever spring 絞り連動片バネ	1	8		
216	Lens release button spring 着脱ボタンバネ	1	11	32FB-#216	
218	Lens release button sleeve 着脱ボタン軸受	1	11	32FB-#218	
221	Spring 引張バネ	1	8		
222	Coupling ring stopper 連動環回転制限	1	8		
223	Coupling lever button 連動片ばねボタン	1	8		

Part No. 部品番号	Name 名　称	Pcs. Per Unit 1台分個数	Reference Fig. No. 参照図番	Common Part No. 共通部品番号	Remarks 備　考
231	Penta-prism retainer ペンタ押え板	1	9		
232	Prism retainer sheet プリズム押えシート	1	9		
233	Prism retaining spring プリズム押えバネ	2	9	32FB-#264	
237	F-mask plate 枠　板	1	9		
239	Prism retaining sponge ペンタ押えモルト	1	9		
242	Exposure mark film 記号表示フイルム	1	11		
250	Prism box プリズムボックス	1	9,11		
251	Viewfield mask 視野枠	1	9		
252	Spacer 間隔枠	1	9		
253	Prism mask プリズム絞り板	1	9		
258	Photo diode フオトダイオード	2	9		
261	Lens release button pad レンズ着脱ボタン飾り	1	11	32FB-#269	
281	Brake release lever ブレーキ解除レバー	1	12		
282	Brake release shaft ブレーキ解除軸	1	12		
283	Collar ブレーキ解除軸カラー	1	12		
284	Brake middle-lever base 中間レバー座金	1	12		
285	Brake spring base 後ブレーキばね基板	1	12		
286	Brake spring 後ブレーキバネ	1	12		

Part No. 部品番号	Name 名称	Pcs. Per Unit 1台分個数	Reference Fig. No. 参照図番	Common Part No. 共通部品番号	Remarks 備考
289	Mirror latch spring ミラー係止ばね (t=0.2)	1	10		
291	Latch lever axle 係止レバー軸	1	10		
302	Mirror shaft 巻上側チリトリ回転軸	1	10		
303	Mirror shaft 巻上側チリトリ回転軸	1	11		
313	Stop-down lever spring 手動絞りレバーバネ	1	10		
314	Stop-down lever screw 絞りレバービス	1	10		
320A	Charge lever axle チャージレバー軸	1	13	31F3B-#317	
320	Collar シャッターレリーズレバーカラー	1	10		
321	Shutter release lever シャッターレリーズレバー	1	10		
328	Signal lever シグナルレバー	1	10		
329	Mirror-up stop lever ミラーアップ押えレバー	1	10		
330	Mirror-down latch lever ミラーダウン係止レバー	1	10		
331	Mirror-up stop lever axle ミラーアップ押えレバー軸	1	10		
334	Mirror charge lever axle 大レバー軸	1	12		
336	Bottom light baffle 底遮光板	1	9		
340	Spring 絞りレバーバネ (d=0.32)	1	10		
341	Spring ミラーアップバネ (d=0.29)	1	10		
342	Middle lever stopper 中間レバー制限	1	12		

Part No. 部品番号	Name 名　称	Pcs. Per Unit 1台分個数	Reference Fig. No. 参照図番	Common Part No. 共通部品番号	Remarks 備　考
343	Spring ダウンバネ(d=0.8)	1	12		
344	Mirror-down lever screw レバー押えビス	1	10		
348	Spring (d=0.26) シャッターレリーズバネ	1	10		
349	Spring (d=0.26) ミラーアップ押えバネ	1	10		
355	Spring (d=0.26) ブレーキレバー戻しバネ	1	12		
357	Signal lever screw シグナルレバー止メビス	1	10		
361	Spring stud ミラーアップ押え レバーバネ掛け	1	10		
367	Down lever eccenter 調整レバー偏心軸	1	12		
368	Down lever adjuster axle ダウンレバー調整レバー軸	1	12		
370	Brake spring screw 後ブレーキバネ止めビス	1	12		
372	Cushion rubber 防振用ゴム	1	10		
374	Collar ミラー巻戻側カラー	1	11		
375	Washer ミラー巻上側ワッシャー	2	11		
378	Mirror spring ミラースプリング　(大)	1	10		
379	Mirror spring ミラースプリング　(小)	1	10		
383	Air damper lever エアダンパー駆動レバー	1	11		
385—1	Damper pin エアダンパー駆動 受けピン	1	11		-3
386—1	Damper connecting pin エアダンパー連接ピン	1	11		-3

Part No. 部品番号	Name 名　称	Pcs. Per Unit 1台分個数	Reference Fig. No. 参照図番	Common Part No. 共通部品番号	Remarks 備　考
387—1	Air damper piston エアダンパーピストン	1	11		-3
393—1	Sylinder cover (B) エアダンパーシリンダー蓋 (B)	1	11		
394	Air damper holder エアダンパーホルダー	1	11		
395	Damper lever screw エアダンパー駆動レバー止めビス	1	11		
397	Damper packing rubber エアダンパーゴム	1	11		
402	Wind-up lever leatherette 巻上レバー用皮	1	1		
403	Wind-up lever screw レバー押えねじ	1	1		
404A	Counter retaining ring 枚数計押え板	1	2		
405	Wind-up lever axle nut レバー軸ナット	1	2		
406	Spring レバー戻しバネ(d=0.35)	1	2	32FB-#406-2	
408	Wind-up lever axle 巻上軸	1	2		
408A	Sprocket release plate スプロ制限解板	1	2		
411	Click lever クリックレバー	1	2		
412	Claw spring 羽根爪押えばね	3	3		
413	Cam 巻上げカム	1	3		
416	Idle gear A アイドルギヤA	1	3		
417	Idle gear B アイドルギヤB	1	3		
421	Spool top gear nut スプール上ギアナット	1	4	32FB1-#429A	

Part No. 部品番号	Name 名　称	Pcs. Per Unit 1台分個数	Reference Fig. No. 参照図番	Common Part No. 共通部品番号	Remarks 備　考
427	Washer (3.5×5.8×0.5) アイドルギアAワッシャ	1	3		
427A	Washer (2.1×4×0.2) 偏心軸ワッシャ	1	3		
429	Sprocket stopper cam スプロケット制限カム	1	4		
430	Washer (7×9.8×0.3) スプール上ギアワッシャー	1	4		
431	Sprocket upper gear スプロ上ギア	1	4

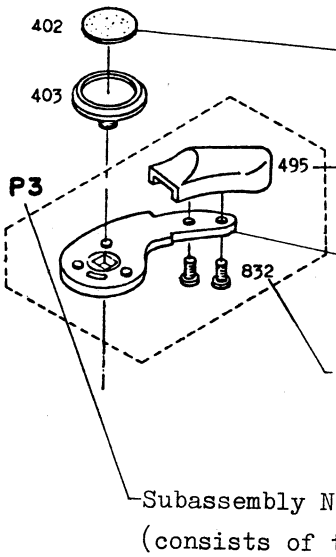
4. SPECIFICATIONS, DRAWINGS AND PARTS LIST

Note:

Parts and subassemblies illustrated in the exploded drawings are listed on the righthand pages.

Parts and subassemblies in this list are all available on order.

The Exploded Drawings are represented in the following way:



(consists of the parts enclosed with dashed line)

Item	Supply	Earlier marking
With part No., but not enclosed with dashed line	Supplied as part individually	○
With part No., and enclosed with dashed line	Supplied as part individually and also as subassembly	○△
Without part No., but enclosed with dashed line	Supplied only as subassembly	△

4. SPECIFICATIONS, DRAWINGS AND PARTS LIST

(1) Specifications

Type of camera: 35mm focal-plane single-lens reflex camera with built-in exposure meter

Film to be used: 35mm cartridge film

Picture frame size: 24mm × 36mm

Standard lens: AI-lens Nikkor 50mm f/1.4, 50mm f/1.8 or 55mm f/1.2

Lens mount: Nikon F mount

Full aperture exposure compensation: Automatic

Shutter: Metal focal-plane, vertical-run type
B and 1 — 1/1000sec.

Self-timer: Built-in

Viewfinder: Eye-level type, field-ratio 93%, vertically and horizontally

Indications in the finder viewfield: Shutter-speed, lens-aperture and 3-signal lights (LEDs) exposure indication

Focusing screen: Matte fresnel field with split-image spot surrounded microprism (type K)

Mirror: Quick return

Depth-of-field preview: Stopped down by lever

Film wind-up lever: Single stroke with working angle 135° and clearance angle 30°

Motor-drive link-up: Capable with Motor Drive MD-11 attached by tripod socket

Multiple exposure: Possible by manipulating the knob

Picture-frame counter: Additive counter, automatic resetting

Film rewinding: Crank type with automatic-return rewind button

Exposure meter: TTL center-weighted. Light receiving element photo-diodes, 3-point 5-step indication by LEDs.
Metering range: EV 1—EV 18 at ASA 100 with f/1.4 lens (e.g. with 50mm f/1.4 lens, 1sec. at f/1.4 to 1/1000sec. at f/16)

Power source: Two silver-oxide batteries, each 1.5V

Metering switch: Turned ON by film wind-up lever

Motor driving switch: Coupled to shutter release button ring

Battery check: By lighting LED with meter switch turned ON

Film-speed range: ASA 1.2 — 3200

Synch socket: X-contact only (synchronized with 1/125sec. or slower)
Provided with hot shoe

Camera back: Hinge opened after lifting up the rewind knob, with safety lock. Detachable. Provided with memo-holder

Dimensions: 142mm(width) × 60.5mm(depth) × 89.5mm(height)

Weight: About 590g (without lens)

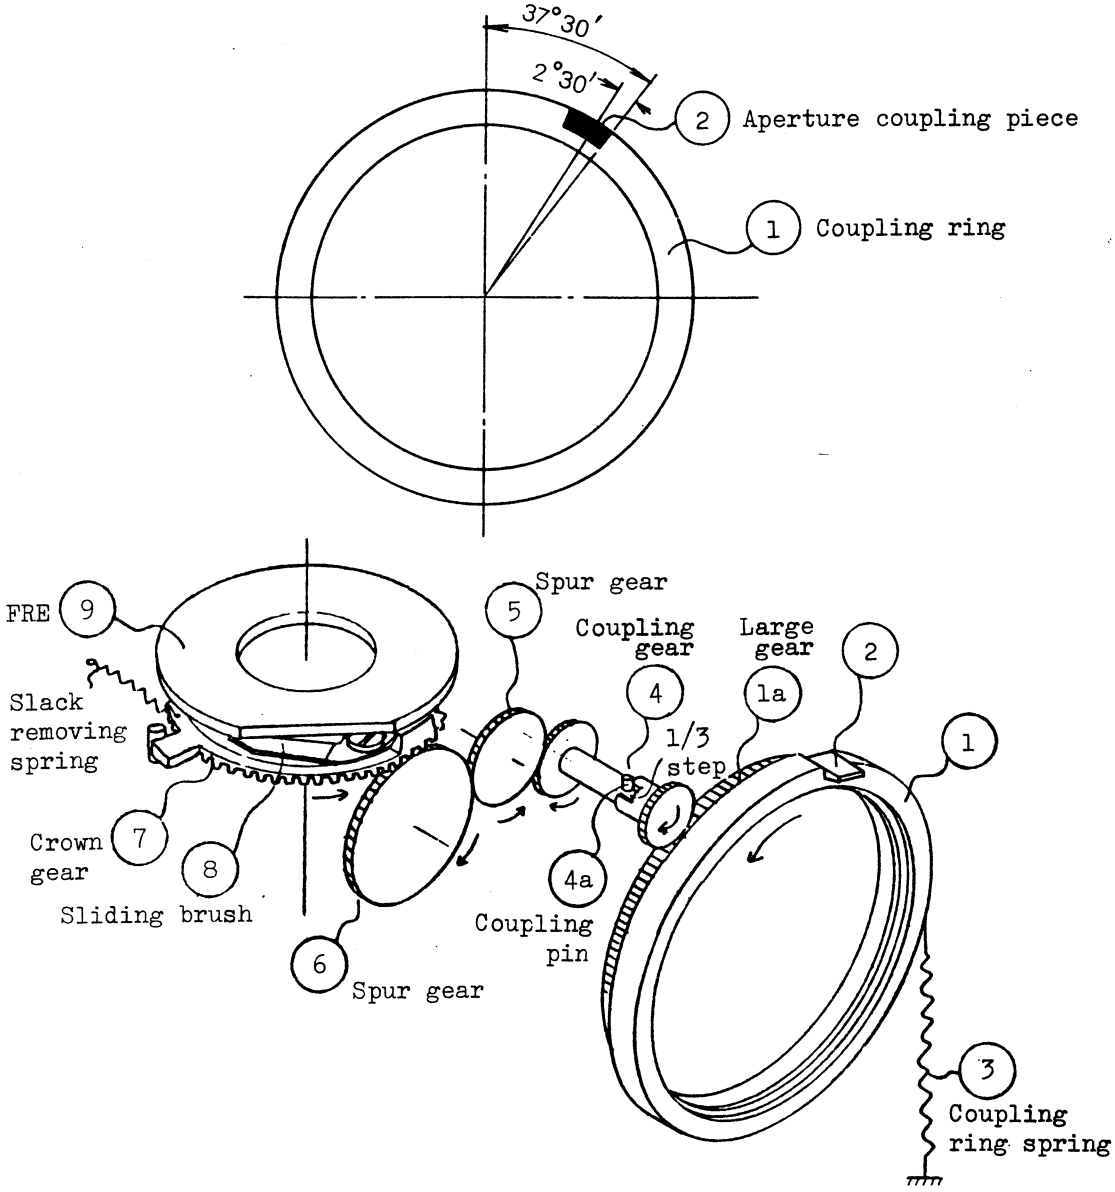
5. DESCRIPTIONS

5. DESCRIPTIONS

(1) Aperture coupling unit

The coupling system of exposure meter to aperture diaphragm in the resent type of camera differs from that in our earlier types of camera in that it calls for no compensation setting at the time of mounting the lens onto the camera body, but only attaching of an interchangeable lens, which automatically performs meter coupling to the aperture (in the case of AI lenses).



When the lens is attached to the lens mount in the turned down state of the aperture coupler②, the protrusion on the aperture ring of lens is connected with the aperture coupler②. A series

of gears arranged between the large gear (1a) on the aperture coupling ring (1) and the sliding brush (8) on the FRE (9), constituing from several spur gears (4), (5), (6), crown gear (7), etc. will change the relative positions between the brush and the FRE in proportion to the rotating angle of the aperture ring of lens, thus varying the electrical resistance.

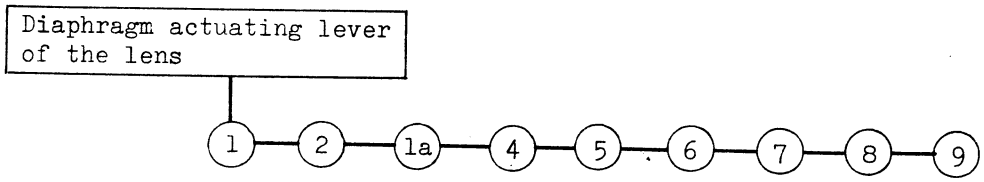
The aperture coupling ring (1), at all times pulled up clockwise by the spring (3), limits the rotation of the coupler (2) to 37°30' as shown in the figure.

The movement of the sliding brush (8), converted to the rotation of the coupler (2), is restricted to a position 2°30' ahead of 37°30', that is, to a position of 35°, by means of another stopper, the angle 2°30' corresponding to 1/3 step of each f-stop.

Whereas for earlier types of camera the lens f/1.4 and f/1.2 necessitate full-aperture compensation, this compensation in the present type of camera is accomplished by the difference between the movement of the sliding brush (8) and the rotation of the coupler (2). In practice, a slack is provided, corresponding to 1/3 step, between the notch on the gear (4) and the pin (4a).

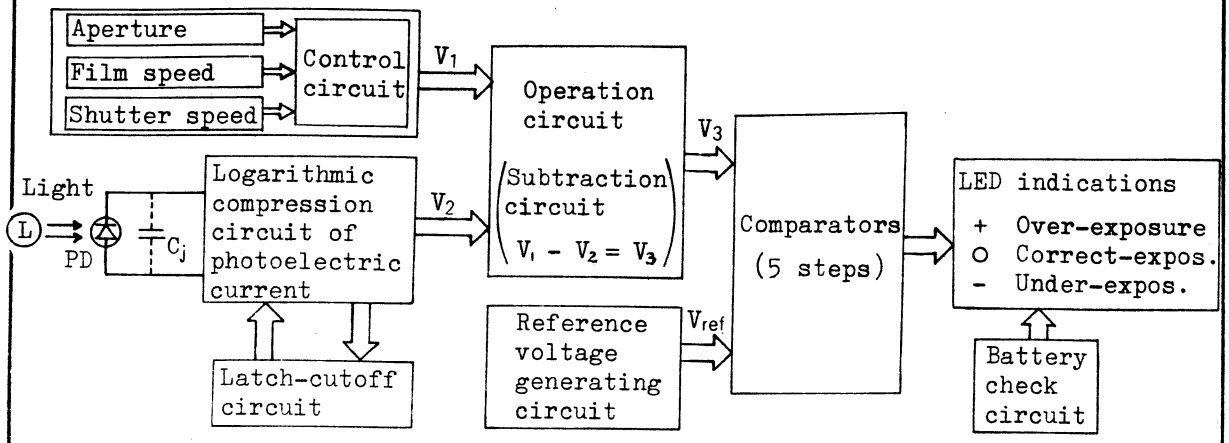
When f/1.4 or f/1.2 lens is mounted at the time of full-aperture, the coupler (2) is engaged at position of 37°30', as shown in the figure, but when a lens of f/2 or smaller aperture is attached, with no need for compensation, the coupler (2) is engaged to the full-aperture at the position where it is rotated counter-clockwise 2°30' from 37°30'. Since the compensations required for the full-aperture of the lens f/1.4 and f/1.2 are 1/3 step and 1/2 step, respectively, the lens f/1.2 may make inevitably over-exposure as far as 1/6 step. However, this does no harm practically, based on our experiences until now.

Order of operation



(2) Light measuring circuit

Fig. 1 Block Diagram



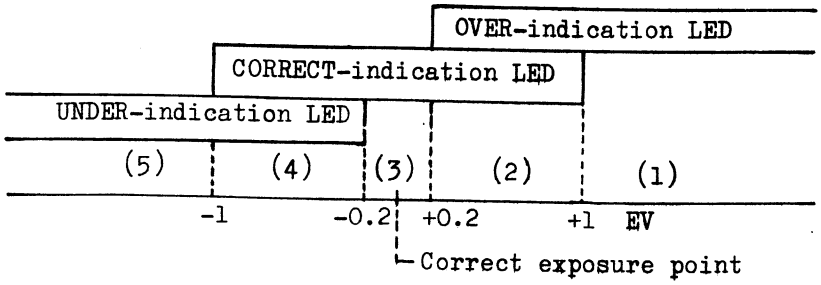
First, informations such as the film speed (ASA), aperture value (f-number) and shutter speed, set to the camera are transmitted to a high-fidelity FRE (thin-film metallic resistor), the change of resistance being converted into its corresponding voltage V_1 by means of the control circuit.
On the other hand, another information such as the intensity of light, causing a change to the photoelectric current in the PD (GaAsP photo-diode), placed in the optical path of the finder, is converted into a voltage V_2 corresponding to the intensity of light by means of the logarithmic compression circuit. Such photoelectric current in the PD, though not influenced by antecedent effects and showing an excellent lineality from high to low brightness, is yet quite sensitive to noises at the time of connection with a power source or speedlight, on account of its minuteness on the side of low brightness. Not only that, owing to the junction capacitance of the PD itself, the current has an injurious effect (latch) on the pre-amp circuit. For example, if a junction capacitance of PD be C_j=700pF, a photoelectric current at low brightness be i_L=50pA, when a voltage noise V_n=1V enters the PD, the time (t) required for removing the charge accumulated in C_j will be

$$t = \frac{C_j \, V_n}{i_L} = 14\text{sec.}$$

Thus, during this time the light measuring circuit may be unstable. Therefore, to avoid such a defect, the equipment has a latch cutoff circuit which stabilizes the light measuring circuit within 0.5sec., because it detects the latched pre-amp signal and is forced to remove the charge accumulated in the junction capacitance of the PD caused by noise.

In the operation circuit, subtraction of two voltages $V_1 - V_2$ brings about a voltage V_3 corresponding to the correct exposure. Furthermore, this voltage, compared with the output voltage V_{ref} obtained from the reference voltage generating circuit, is divided into 5 steps by means of 4 comparators. These 5 exposure steps are indicated, as shown in Fig.2, by the use of 3 LEDs (light emitting diodes) --- (1) and (2) OVER-exposures, (3) CORECT-exposure, (4) and (5) UNDER-exposures. Namely, lighting only of the central, correct exposure indicating LED shows a range within ±0.2EV from the correct exposure point, and both of the other two, a range -1EV — -0.2EV or +0.2EV — +1EV.

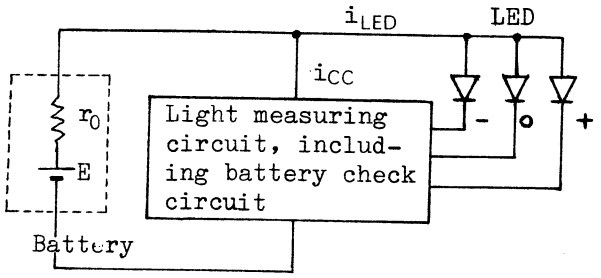
Fig. 2 5-step Indications of LEDs



The driving current for these LEDs is kept constant to ensure a constant brightness in spite of variation of the power voltage. Beside, since the temperature factor of light emitting efficiency of LED is minus, that of driving current for LED is made plus, so that the brightness is kept constant in spite of temperature change. The life of the battery is thus elongated. In addition, the above circuit, including a battery check circuit, extinguishes the LED at a voltage lower than the circuit operating voltage.

With regard to the light extinction circuit, we have in general the formula as below:

Fig. 3 Circuit



$$E - r_0 \left(i_{LED} + i_{CC} \right) = \left(\begin{matrix} \text{Battery} \\ \text{voltage} \end{matrix} \right)$$

where r_0: Internal resistance in the battery

E : Open voltage of the battery

i_{CC}: Light measuring circuit current

i_{LED}: Driving current for LED

The value r_0, when the battery is used at a lower temperature, or in an older battery, is so much increased, and thus the battery voltage so much droped. If the voltage is lower than the battery check point, LED will go out, but i_{LED} becomes zero, the battery voltage rising $E - r_0 \cdot i_{CC}$, and the LED will light again. Therefore, this process is repeated until $E - r_0 \cdot i_{CC}$ becomes lower than the battery check point.
As the repetition goes rapidly, if the LED is viewed with the eye, it is seen slowly darker, after the extinction is started, telling us the necessity of replacement of the battery. So long as LED is seen bright, the measuring circuit operates normaly.

Electrical characteristics for reference:

Power requirement in the light measuring circuit, including driving current for LED	One of LEDs lights	2.3 mA
	Two of LEDs light	3.2 mA
Battery check voltage	2.24 V	
Temperature range for use	-20° C — +60° C	

6. DISASSEMBLY, REASSEMBLY AND ADJUSTMENT

Note: For the figure numbers in the Flow charts, refer to the Exploded drawings.
The parts enclosed with (#) are not available as those for repairing.
Abbreviations:

[N] Remove sprocket shaft pulling slantwise toward bottom cover side.

Sprocket shaft bearing #438

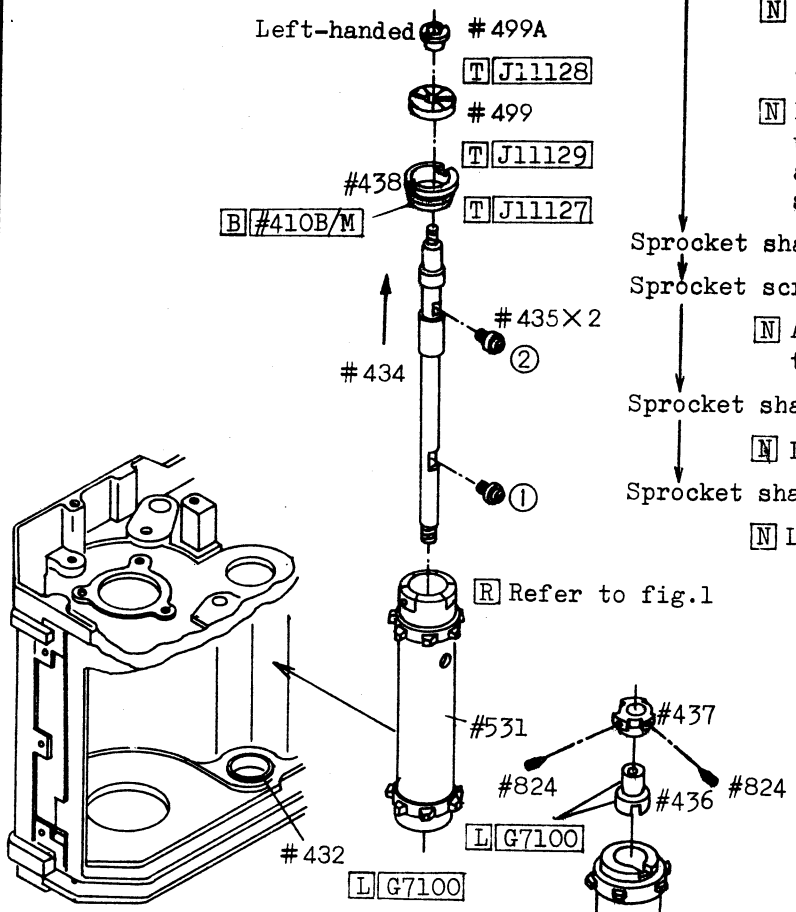
[T] J11127

Sprocket

Note: For reassembly, reverse disassembly procedure.

(2) Reassembly and adjustment

① Reassembly of sprocket



Sprocket #531

N Beforehand, assemble spring and collar into sprocket, as shown in fig.1.

N Pulling sprocket shaft #434 upward in the direction of arrow, insert slantwise the sprocket into bearing #432.

Sprocket shaft bearing #432

Sprocket screw #435×1

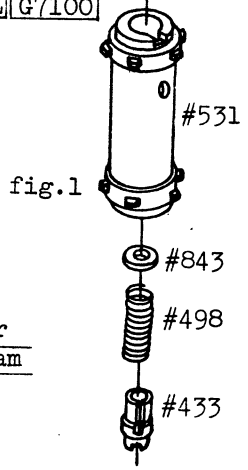
N Attach screw ② through the hole in the sprocket.

Sprocket shaft collar B #499

N Left-handed

Sprocket shaft collar C #499A

N Left-handed



Sprocket #531

Sprocket collar A #436

Sprocket collar A nut #437

(Lock set screws #824×2)

Washer #843

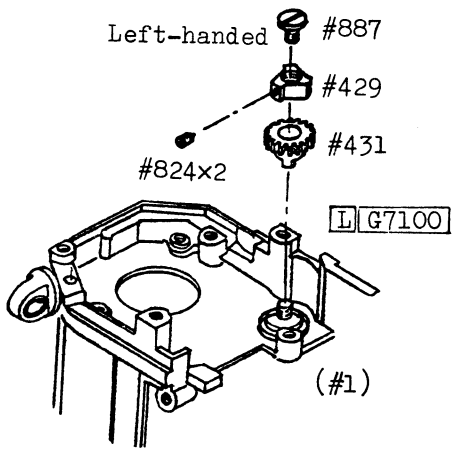
Spring #498

Sprocket shaft #434

Screw #435×1 (Screw ①)

Sprocket collar #433

② Reassembly of sprocket upper gear and sprocket stopper cam



Sprocket upper gear #431

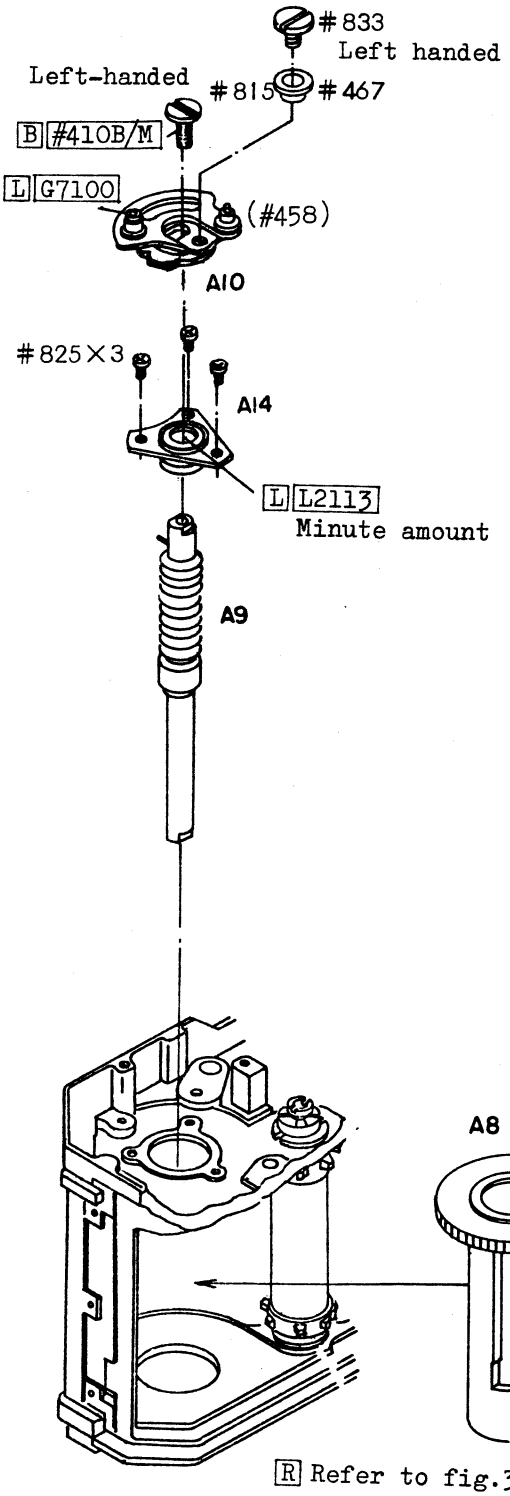
Sprocket stopper cam #429

R N For positioning stopper cam, refer to paragraph ⑦. Fasten up tentatively set screws #824×2.

N Screw in stopper cam #429, so that it is flush with the top end face of #434.

Screw #887 (left-handed)

③ Reassembly of spool



Spool A8

↓

Spool shaft A9

↓

Spool shaft bearing A14, ⊕#825×3

N Insert end of spring #529 into slit of bearing A14. (For positioning, refer to fig.2)

↓

Set cam A10

N Give the shaft A9 one turn clockwise, then attach bearing A10.

↓

Wind-up shaft screws, ⊖#815×1 (left handed), collar #467, ⊖#833×1 (Left handed)

C After reassembling, make sure of correct returning of set cam A10.

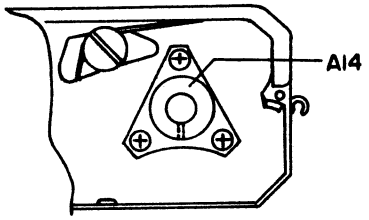


fig.2

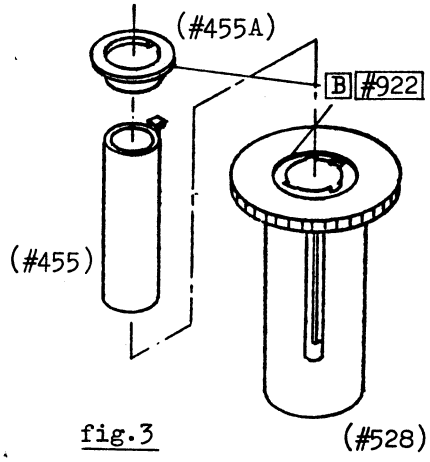

fig.3

④ Reassembly of spool top gear, lower bracket, wind-up gear

Spool top gear A7

[N] Rotating spool, let friction plate #456-1 drop into inside groove of spool.

Lower bracket A11, ⊕#807×2, ⊕#835×1

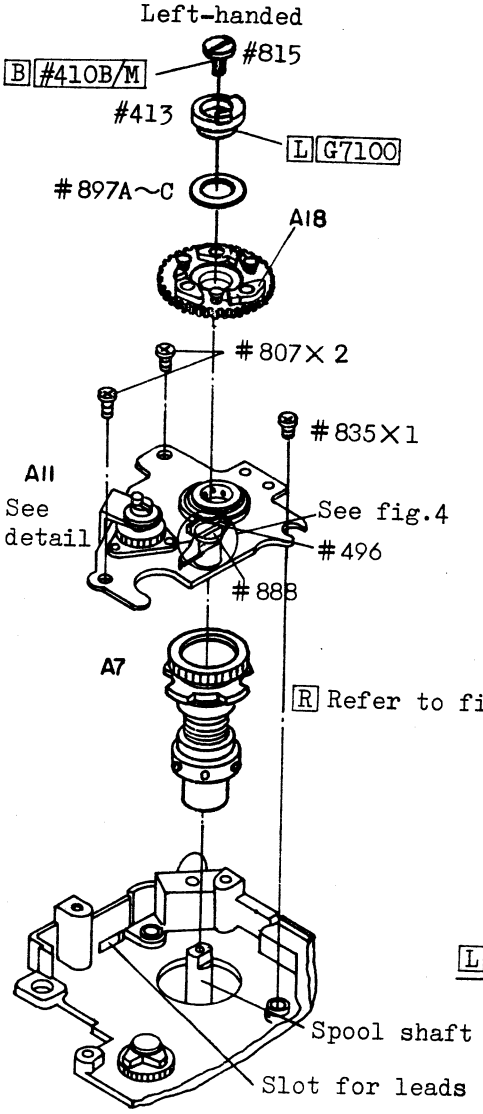
[N] Rotating spool, attach the bracket A11 in the most smoothly rotating position.

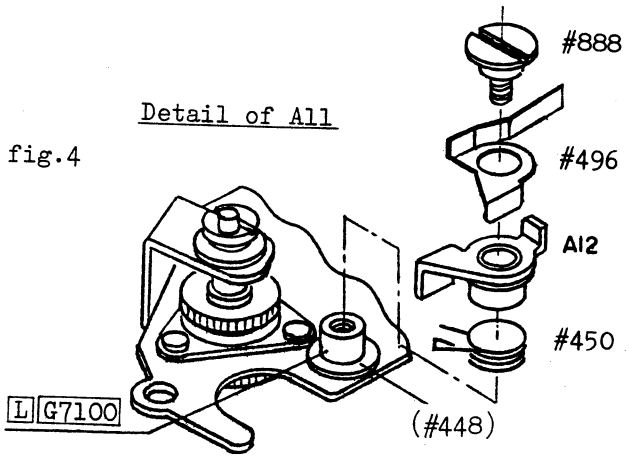
Wind-up gear A18, charge cam (#413), washer #897A—C (t=0.05, 0.1, 0.2mm)

[N] For positioning, refer to paragraph ⑧.

Wind-up screw ⊖#815×1 (left handed)

Soldering #151 (red), #176 (orange)





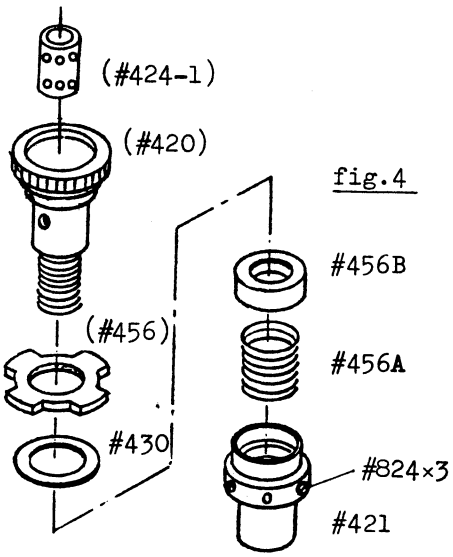


fig.4

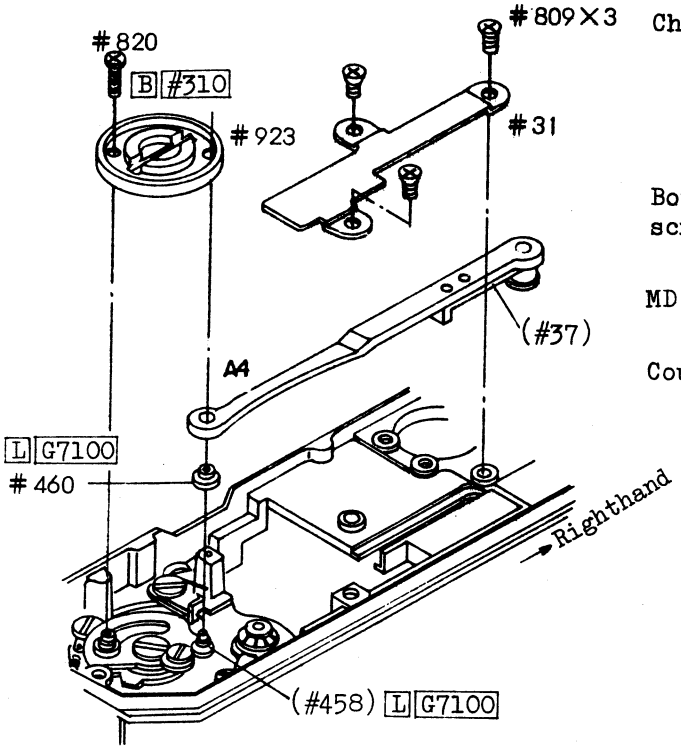
Specified friction of spool:
125—157g·cm

[R] [A] For adjusting friction, releasing set screws #824×3, move nut #421 vertically.

⑤ Reassembly of shutter charge lever, MD coupling



Cam collar #460

↓

Charge lever A4

N Bringing (#37) to the right side of charge pin, put #460 into the hole of A4.

↓

Bottom retaining plate #31, screws ⊕#809×3

↓

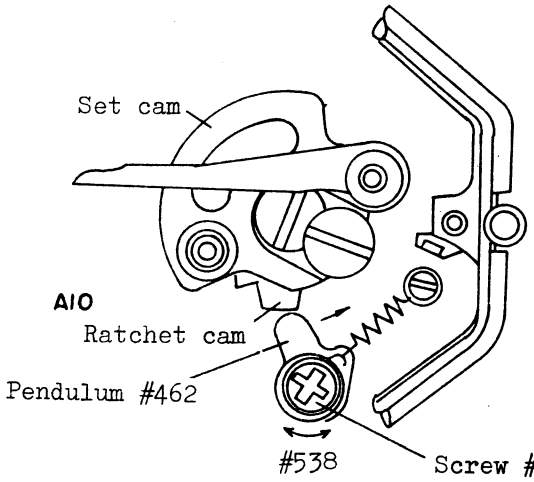
MD coupling #923

↓

Coupling screw #870

C Shutter should be positively charged, after wound up gently.
Be sure of positive returning of set cam.

⑥ Adjustment of ratchet cam, pendulum

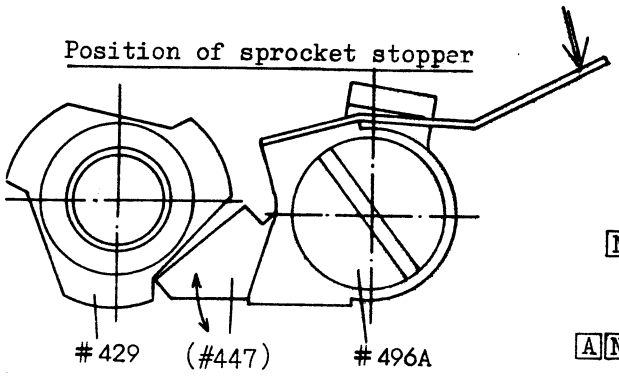


Positional relation of wind-up stopper to pendulum

Clearance between pendulum #462, disengaged from ratchet cam A10, and wind-up lever coming to the limit, is to be 0—0.2mm.
For adjustment, maniplate pendulum eccenter axle #538.

C After adjustment, make sure of correct charging and possibility of winding-up in spite of rapid or slow and strong or weak winding-up manipulation.

⑦ Positioning of sprocket stopper, sprocket

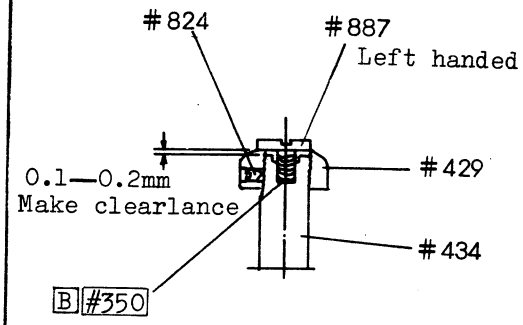


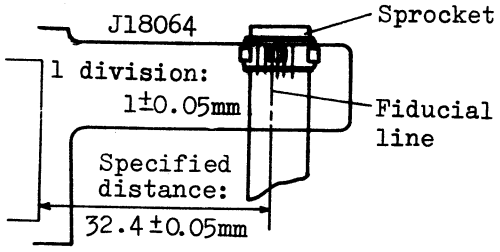
Bringing wind-up lever to the limit, adjust slack by changing clearance between (#447) and #429.
Specified slack: Within 0.8mm (at the top of each sprocket tooth)

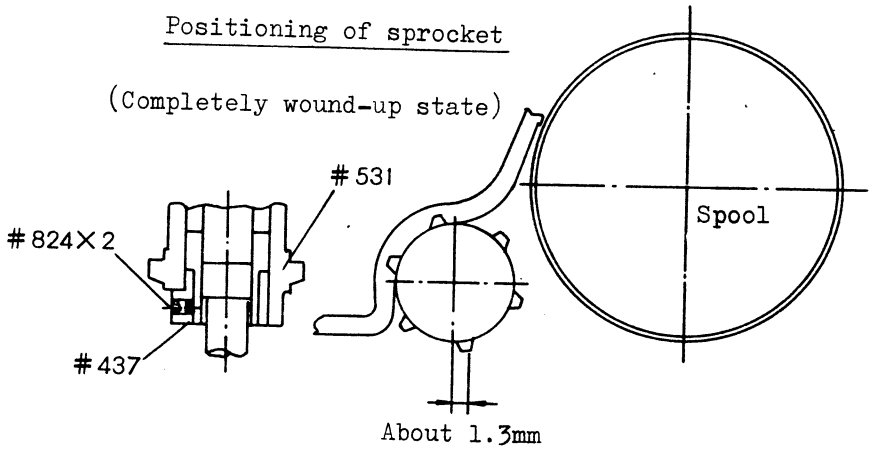
[N] Winding up lever three times, see that slack is within 0.8mm at all positions of #429.

[A][N] In positional adjustment, maintain a clearlance of 0.1—0.2mm between #429 and #434, as shown in left-hand fig.

[T][C] For checking slack, use slack check tool J18064.





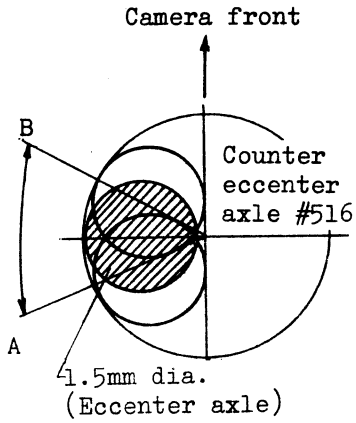


[A] Set the lever to completely wound-up position, and release screws #824×2.

[T] Use tool J18064.

[C] Correct position of the tooth of sprocket is to be within 1.3mm, as shown in fig. above.

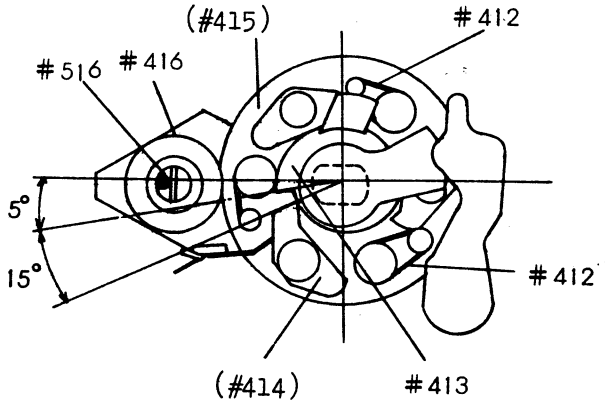
⑧ Positioning of counter eccenter axle #516, wind-up gear A18 and wind-up cam #413



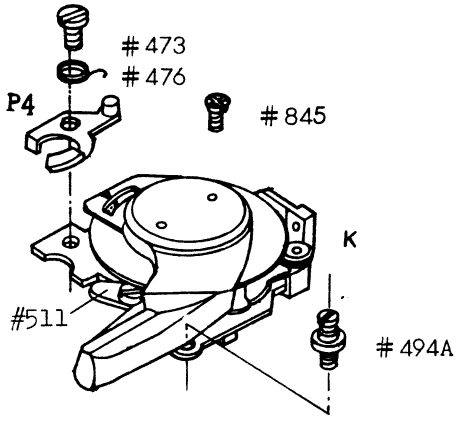
Completely wound-up state

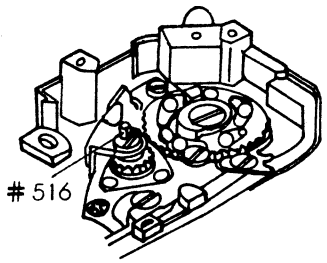
[R] Assemble wind-up gear A18 and wind-up cam #413 in a completely wound-up state. Engage (#415) to #416 so that axle (1.5mm in dia.) #516 comes within the range A — B as shown in lefthand fig.

[N] Relative position of wind-up cam #413 to charge cam claw (#414) is to be such that claw end comes to about 20° from the center line, as shown in fig. below.



⑨ Reassembly of upper bracket





Upper bracket K

[N] Settle wind-up lever in its flush position, attach screws ⊖#494A×1 & ⊕#845×1.

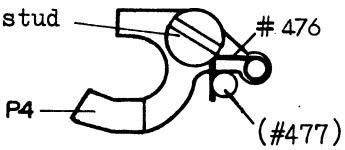
[N] For screwing in ⊕#845×1, turn counter dial up to notch.

MD switch stopper P4, ⊖#473×1

[N] Position of stopper spring is as shown in fig. below.

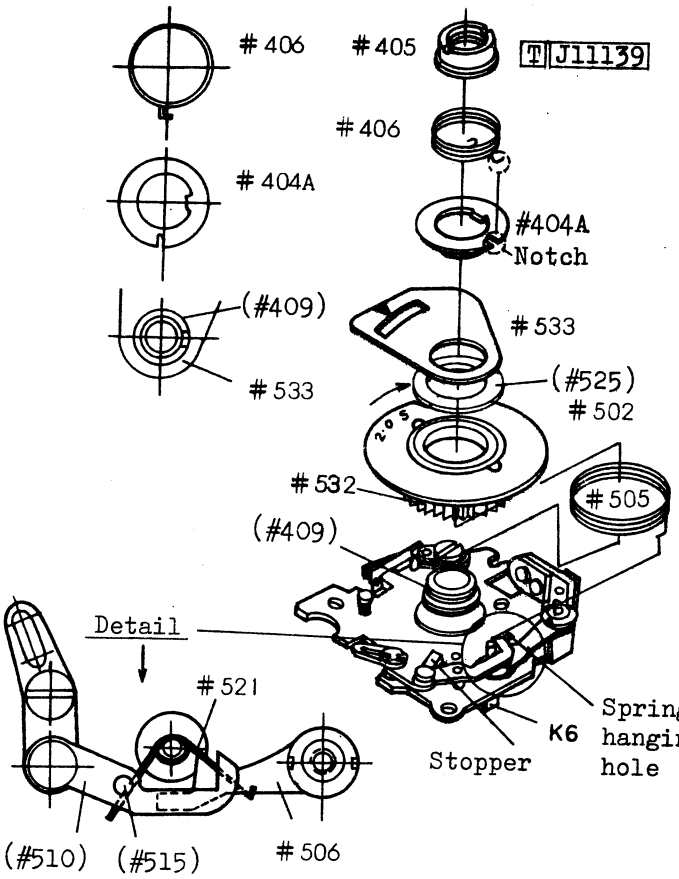
[N] Screw in ⊖#473, turning the dial up to notch.

Soldering of #162 (blue), #164 (violet)



[C] After attaching upper bracket K, close the camera back, and in this state see that the dial advances correctly (without jump, double counting, no-counting, etc.), and check correctly return of the dial.

⑩ Attaching of upper bracket K, counter dial K7



Hanging position of spring #521

Counter spring #505, counter dial #502, ratchet #532, washer (#525)

R Insert spring #505 into spring hanging hole in upper bracket (#451). Hang #505 on ratchet of K7. Turn K7 one rotation clockwise and turn it back to stopper.

Index plate #533

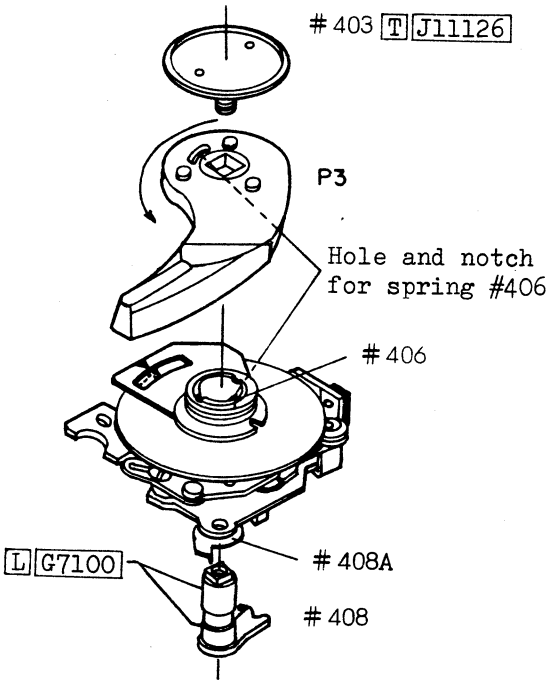
R Hang spring #406 on the notch of ring #404A, and insert it into (#409).

Lever axle nut #405

A Bring index ▼ on #533 opposite S on counter dial, and fasten #405 tightly.

C Rotation of dial #502 must be smooth.

⑪ Attaching of wind-up lever

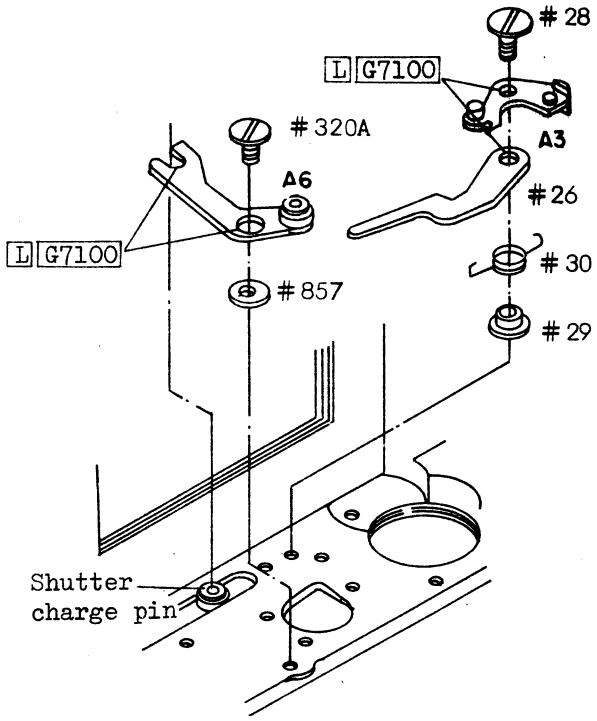


Tentative attaching of wind-up lever P3

R Hang spring #406 on lever P3. Wind it up about one rotation, and fasten it with screw #403 in position.

C Movement of lever P3 should be smooth.
Thrust slack of P3 is to be within 0.13mm.

⑫ Attaching of charge lever, MD switch coupling lever, battery chamber



Body

↓

Charge lever washer #857,
charge lever A6

N Fit forked end of lever A6 to shutter charge pin.

↓

Charge lever axle #320A

↓

Blank shot check lever collar #29,
MD signal lever spring #30

↓

Blank shot check lever #26

↓

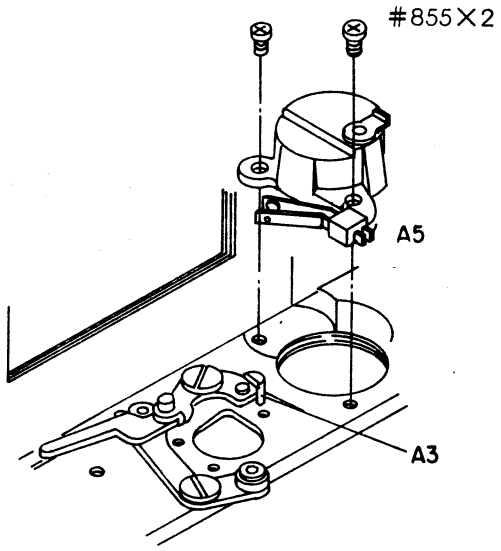
MD switch coupling lever A3

N Vertical slack of lever: About 0.1mm

↓

Signal lever axle #28

C Wind up and then turn the lever gently. Make sure of settling of charge pin onto #26, before pendulum is released.



Body

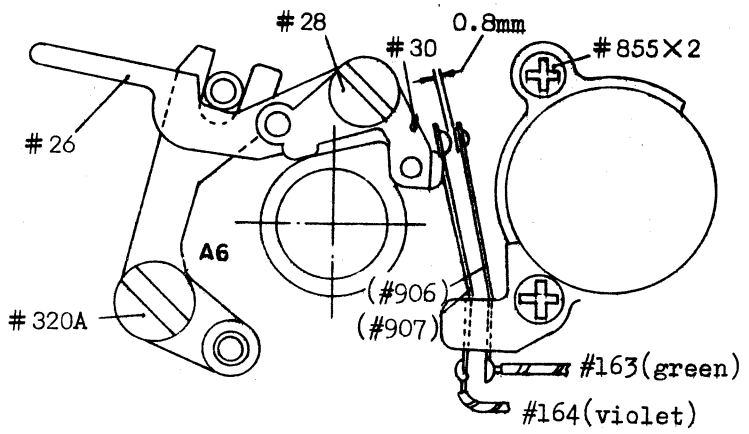
↓

Battery chamber A5, ⊕#855×2

N For adjusting MD wind-up switch, refer to paragraph ⑬

⑬ Adjustment of charge lever, MD wind-up switch

Completely wound-up state

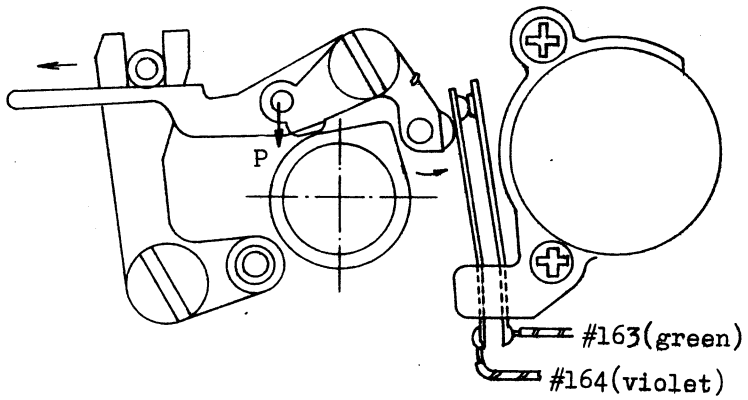


(MD wind-up switch turned OFF)

[C] Switch contact A (#906) should separate from contact B (#907) to some extent(0.8mm).

[A] If not, bend wind-up switch contact A (#906) and/or B (#907).

Halfway wound-up state



(MD wind-up switch turned ON)

Specified contact pressure: About 50 — 60g

[C] Through the whole time of wind-up, MD wind-up switch should be kept turned ON positively.

⑭ Attaching of click pulley and stretching of T-dial string

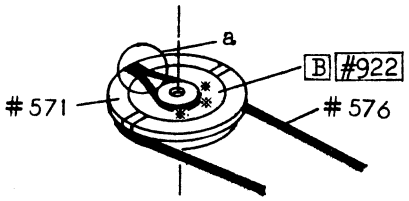


fig.1

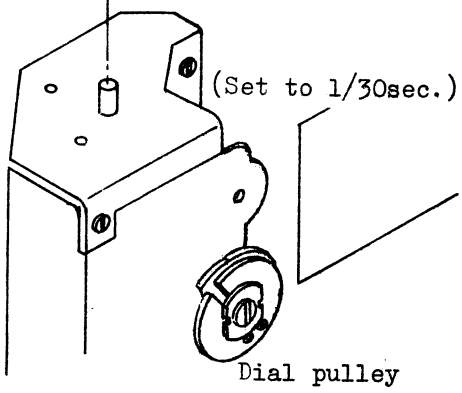

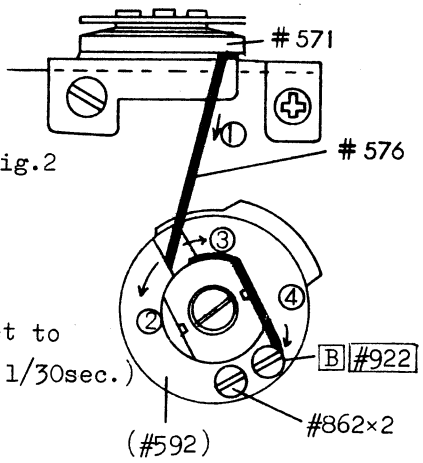

fig.2

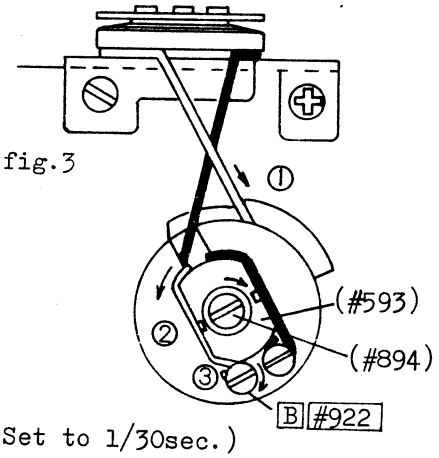

fig.3

Attaching of click pulley #571 and stretching of T-dial string #576

[R] Encircle and adhere the string #576 round inner boss of the pulley #571, as shown in fig.1.

[N] Stretch the string #576 tightly, and apply a little amount of adhesive within the area with ※-※-※, as it is liable to spread out.
String should be gathered (not crossed) at a, as shown in fig.1

Stretching of string

[R] Set click pulley and dial pulley to position 1/30sec. (See fig.2 and fig.3)

Stretching-(1)

[R] Turn the string counterclockwise in the direction of arrow, and attach it onto screw ⊖#862, as shown in fig.2.

[N] Winding direction of string on screw ⊖#862 should be clockwise. At this time, dial pulley (#592) is liable to turn, hold it firmly.

Stretching-(2)

[R] Then, turn the other portion of string clockwise in the direction of arrow, as shown in fig.3, attach it onto another screw⊖#862.

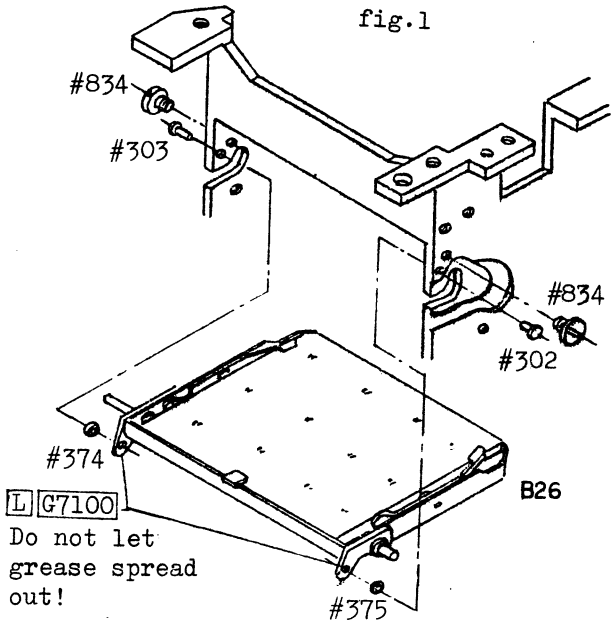
[N] Winding direction of string on screw ⊖#862 should be clockwise.

[B] Cut off superfluous portion of string, and adhere its ends to screw ⊖#862×2.

[C][A] If the string is found loosend, release screw (#894) and turn (#593).
After tighten up, attach shutter dial tentatively to check for smooth rotation (without heaviness, unevenness and seizure).

⑮ Reassembly of front plate (mirror, mirror holder, stop-down lever unit)

fig.1



Front plate (#6)
↓
Mirror holder B26
N Take caution not to scratch or soil the coating surface.
↓
Washer #375
↓
Collar #374
↓
Mirror shaft (wind-up side) #302, (rewind side) #303, ⊖#834×2
N Thrust play on the axles of mirror holder B26 is to be within 0.3mm, and the holder should move smoothly (without any seizure).

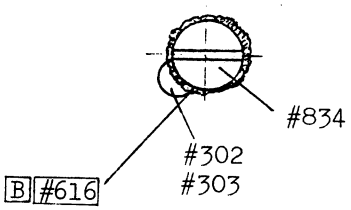


fig.2

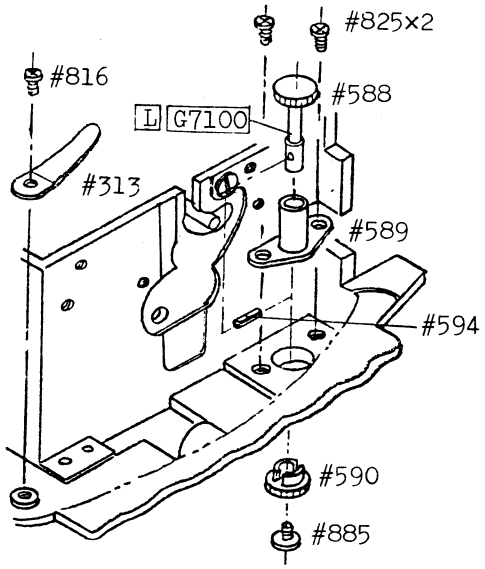

Front plate (#6)

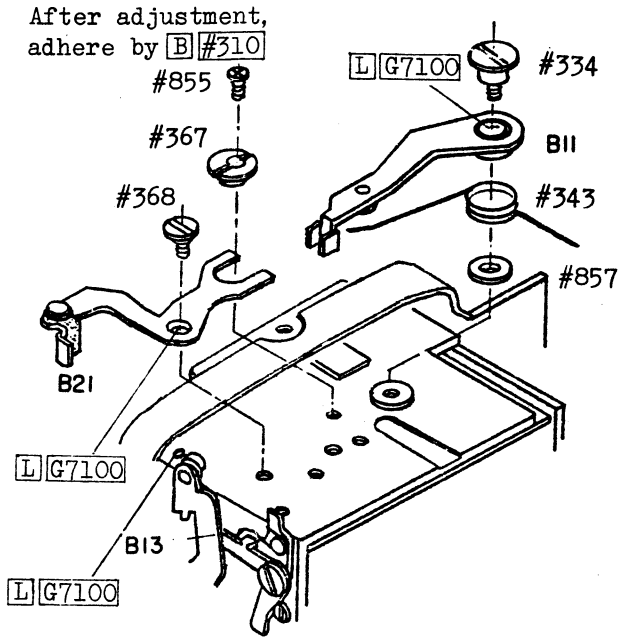
⑱ Reassembly of front plate (charge lever, mirror-up lever, middle lever)



Front plate (#6)

↓

Mirror down lever adjuster B21, ⊖#368

↓

Down lever eccenter #367, ⊕#855

↓

Mirror charge lever B11, down lever spring #343, mirror charge lever axle #334

↓

Brake spring base #285

↓

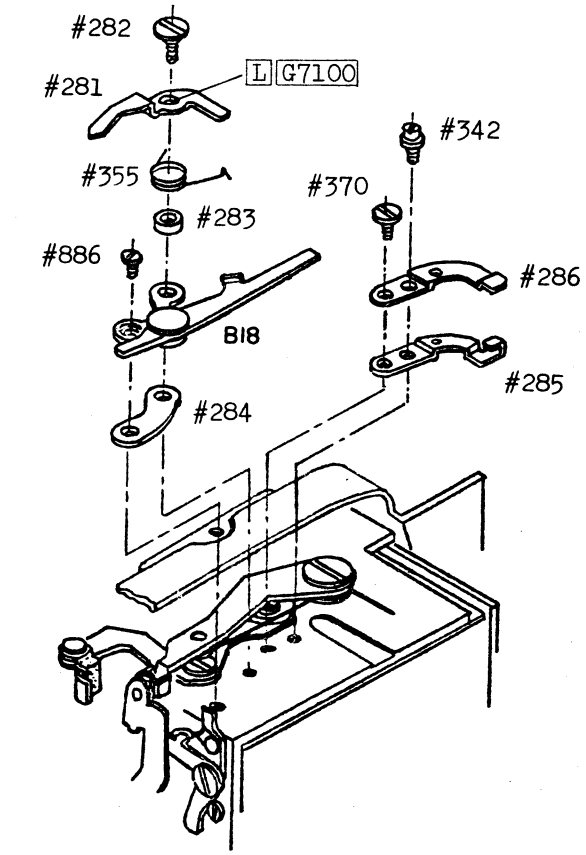
Brake spring #286, ⊖#370×1, middle lever stopper #342

↓

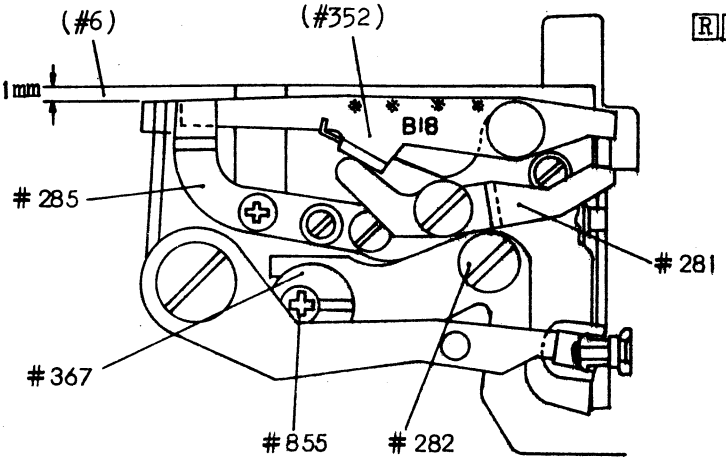
Middle lever base plate B18, washer #284, ⊖#886×1

↓

Brake release lever #281, collar #283, spring #355, ⊖#282×1

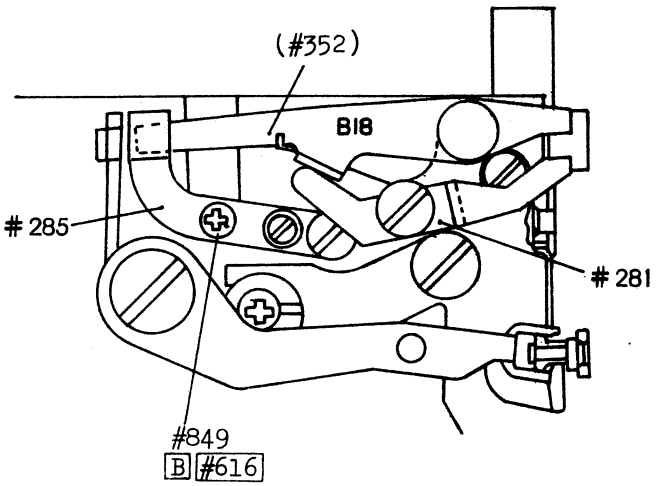


⑲ Attaching of 2nd curtain brake



R A Attach B18 in such a psition that its straight edge marked with ✳-✳-✳ is parallel to the end surface of mirror box B. (Distance between (#352) and the end surface of mirror box is to be about 1mm.)

After shutter released



C After shutter releasing, B18 should be braked by #285 and #286.

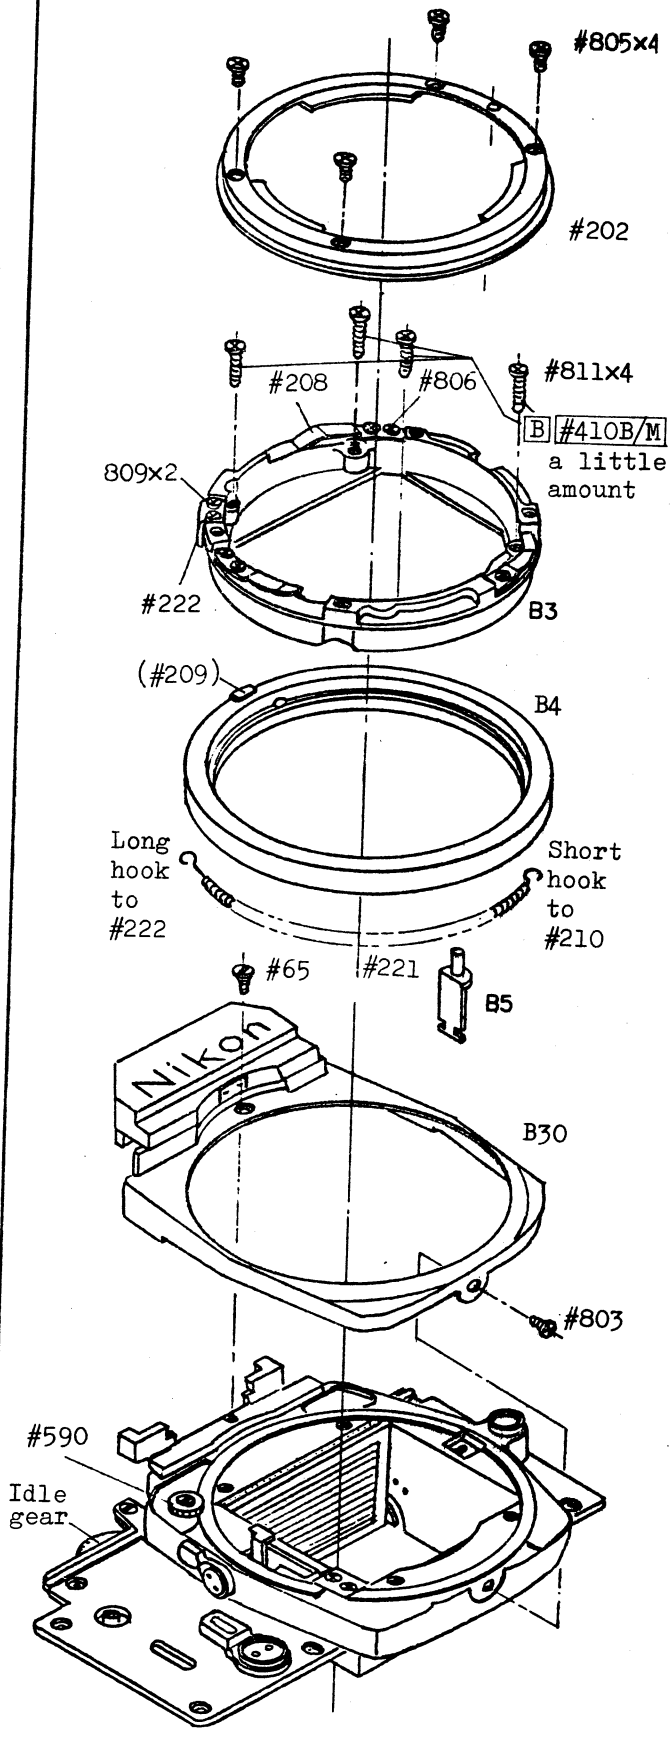
• 2nd curtain brake mechanism

MD wind-up signal middle lever being brought between brake base plate and brake spring, movement of signal lever is braked to prevent noises caused by 2nd curtain.

A Releasing the shutter several times, make adjustment of spring pressure so that the deepest engagement is obtained between (#352) and #285 (with #286), by means of screw #849.

B After adjustment, adhere the screw head firmly in position with B #616 .

⑳ Reassembly of aperture coupling ring



Front cover, ⊖#65×1, ⊕#803×1

↓

Lens release lever B5

↓

Aperture coupling ring

R Hang longer hook of spring #211 on #222, and shorter one on #210.

↓

Lens mount, ⊕#811×4

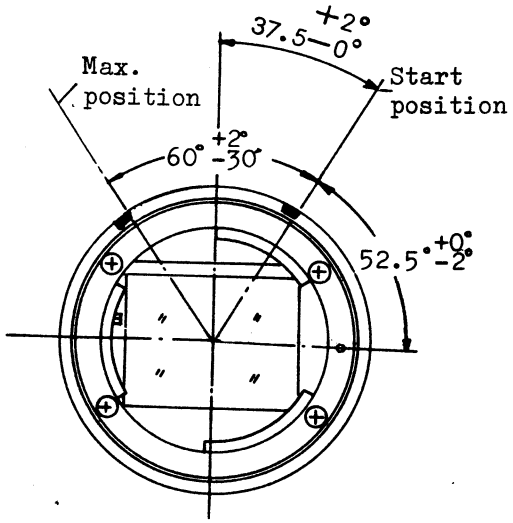
R Fasten up aperture coupling ring in its most smoothly rotating position.

↓

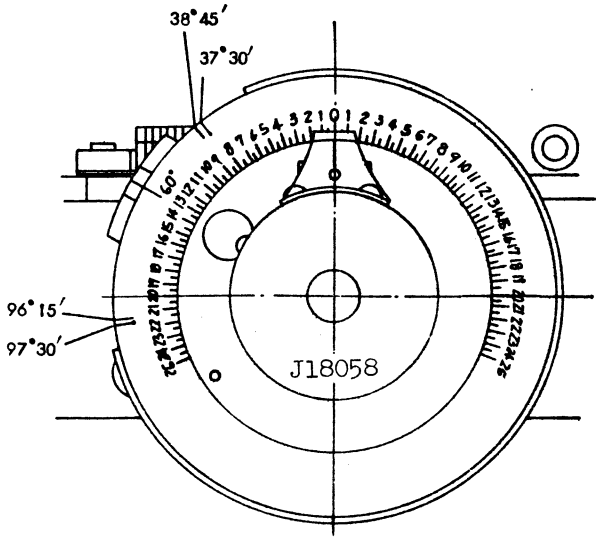
Bayonet ring, ⊕#805×4

C After reassembly, check for correct torques at the start and the max. rotating position of coupling piece(#209). For measuring methods, refer to paragraph ㉑ .

Specified angles:

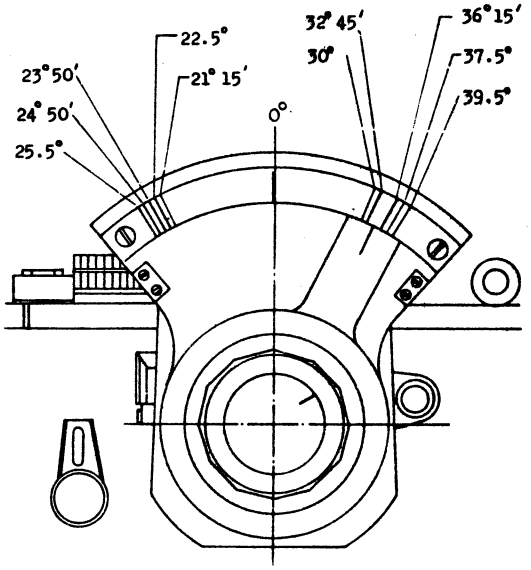


(21) Measuring methods of angular positions of aperture coupling piece

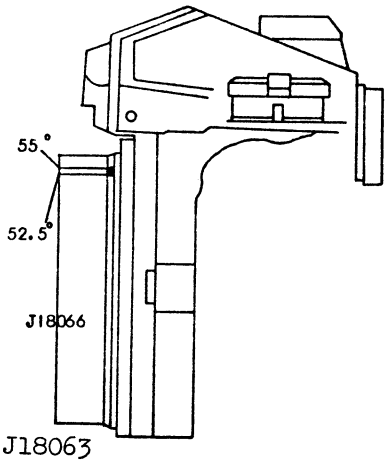


Specified angles:
At start position ..... 52.5° ±0°30′
At max. rotation ..... 112.5°
Specified torque ... Within 350g·cm

•Method by AI click torque meter J18058
Attach the meter to camera bayonet, and make measurement by means of marked-off lines on the meter.



•Method by coupling piece torque meter
Settling claw (fork) of the meter on coupling piece, and attach the meter to camera bayonet. Make measurement by means of marked-off line (52.5°) on the meter.



•Method by AI F-figure field check gauge J18063 (For angle only)
Attach the gauge to camera bayonet, and make measurement by means of marked-off lines (52.5°and 55°) on the gauge.

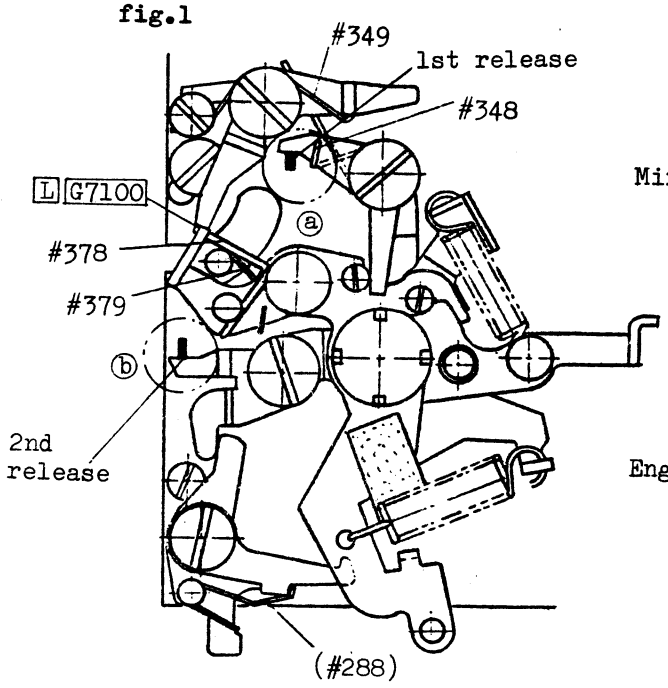
[A] If any deviation is found, make adjustment by shifting coupling piece stopper #222.

[N] The torque is to be measured in the direction in which coupling piece returns to its original position.

㉒ Reassembly of mirror box to body

Left-hand side view of mirror box

fig.1



Body

↓

Mirror box, ⊕#817×1, ⊕#810×5

Ⓝ Keeping shutter charged, release blank shot check lever, and the halfway wind-up position will be obtained.

Ⓝ (1) Associated parts with mirror box are to be set to charge position.
(2) All perts are to be assembled to engage as shown in fig.1—3. (See engaging part ⓐ — ⓔ)

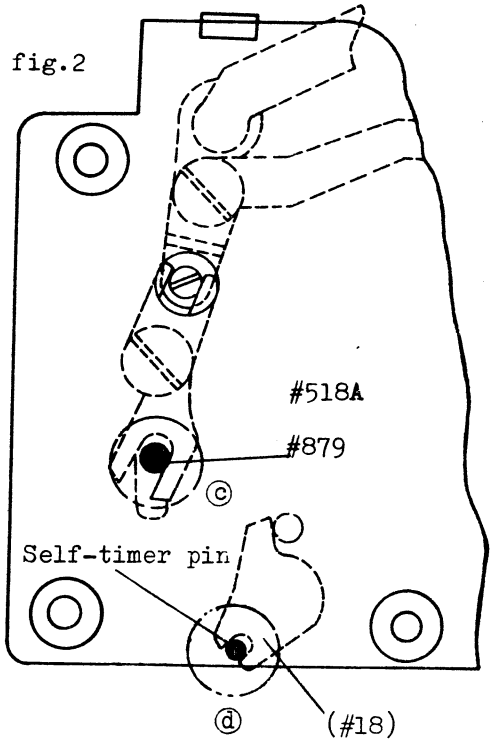
Engaging part-
- ⓐ Shutter release lever #321 to 1st release
- ⓑ Signal lever #328 to 2nd release
- ⓒ Release lever fork #518A to release lever guide pin #879
- ⓓ Self-timer coupling lever (#18) to self-timer pin
- ⓔ MD wind-up middle lever (#352) to MD signal pin (#27).

Ⓡ Start fastening-up of screws from ⊕#817×1.

Ⓒ After assembly, make sure of positive operations of mirror, wind-up lever and shutter.

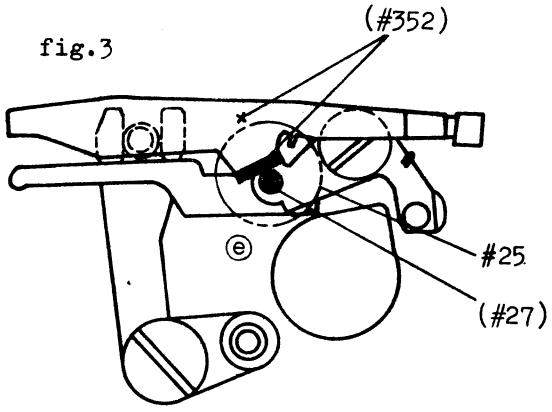
Front view of mirror box

fig.2

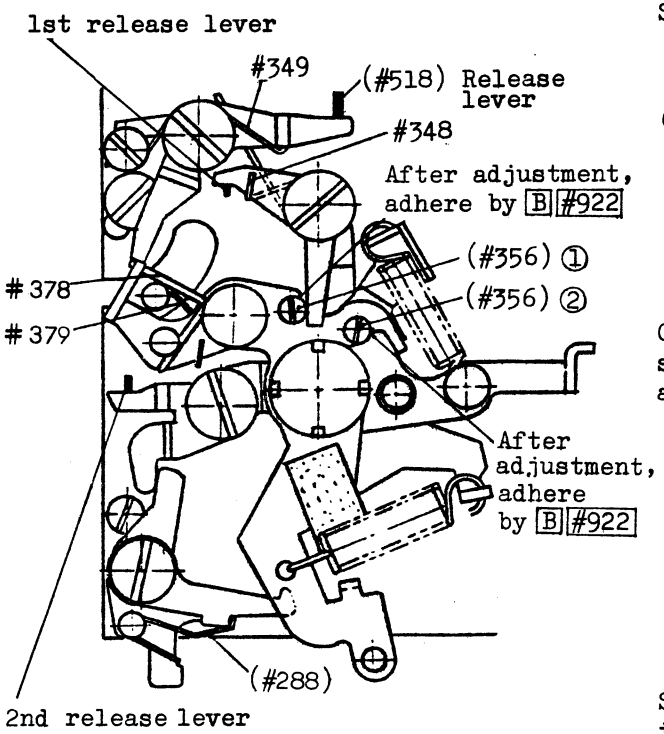


Halfway wind-up position

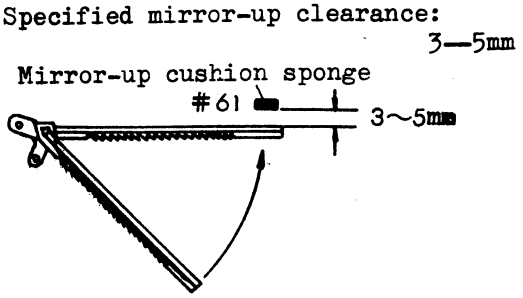
fig.3



㉓ Adjustment of mirror-up clearance and aperture coupling lever height



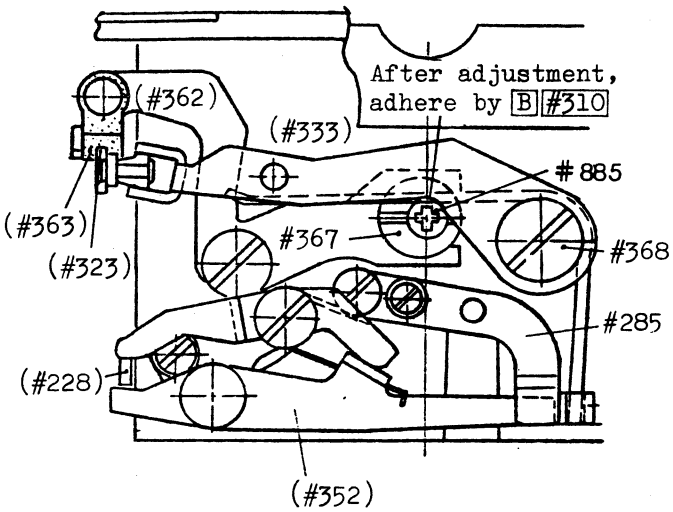
Specified mirror-up clearance:
3—5mm



Clearance between mirror-up cushion sponge #61 and top surface of mirror at the moment shutter is released.

A Make adjustment by eccenter screw (#356) ① .

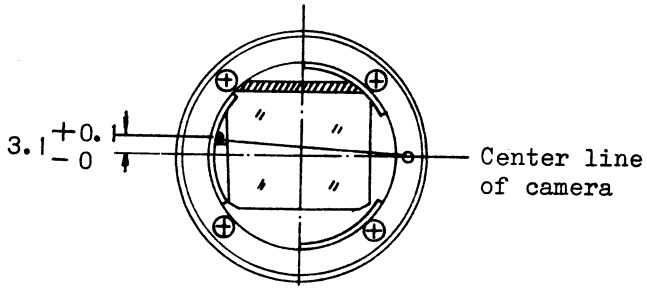
B After adjustment, adhere the screw.



Specified height of aperture coupling lever from camera center:

- After wind-up, $3.1^{+0.1}_{-0}$ mm
- Before wind-up, 3.5mm or less
- Difference between before and after wind-up, 0.15mm or more

T For measurement, use exclusive gauge.



A For adjusting a larger difference before-and-after wind-up than 0.15mm, decenter #367.

A B Adjustment is posible through tripod socket hole. After adjustment, adhere #367 in position.

A After wind-up, make adjustment of $3.1^{+0.1}_{-0}$ mm by eccenter screw (#356) ② .

C After wind-up, make adjustment, make sure of heights before-and-after wind-up by means of coupling lever height tool, and check for correct operation of mirror with normal lens.

㉔ Reassembly of T-dial pulley F7

1/1000sec. position

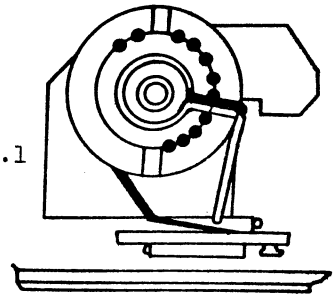


fig.1

Front plate (#6)

↓

T-film base plate B23, T-film B24, T-film washer #624

[R] Clean T-film, using liquid (alcohol/ether) cleaner, and make sure of no scratch, dust, etc. Set click pulley to 1/1000 sec. (Refer to fig.1)

[A] Choose an appropriate thickness of washer #624 (t=0.1—0.4mm).

$$\begin{pmatrix}\text{Standard}\\ \text{thickness}\end{pmatrix} = \begin{pmatrix}\text{Clearance for}\\ \infty\ \text{adjustment}\end{pmatrix} - (0.2\text{mm})$$

T-film is not to be seized by field frame.

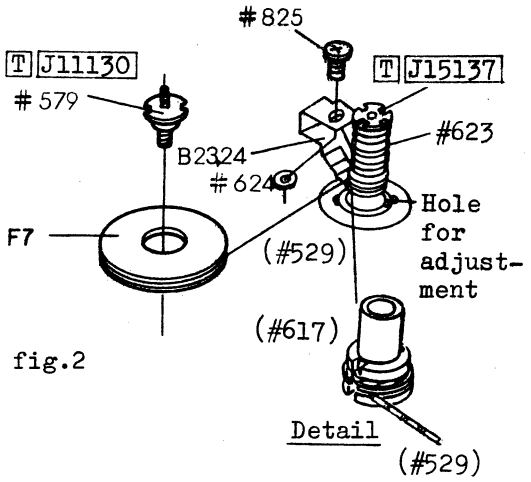

fig.2

↓

#825

↓

T-dial pulley F7, shoulder screw #579

[R] Wind string one turn counter-clockwise round T-film pulley F7, and attach this with #579.

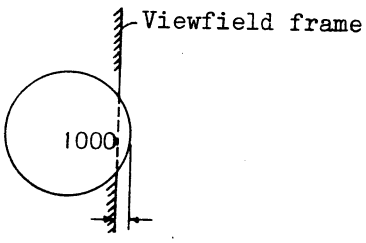
[A] Turn T-film spring 1-3/4 rotations clockwise, and hook it.

[T] Use spring hooking tool J15137.

[N] T-film string #599 should be stretched through notched part of string spool (#617). (Refer to fig.2)

[A] For adjustment of protrusion for shutter speed figure, release screw #825, and shift the position of T-film base plate B23.

[C] Turning T-film pulley, make sure of correct movement of T-film without causing decentring, seizure, scratch, cutting-off,etc.

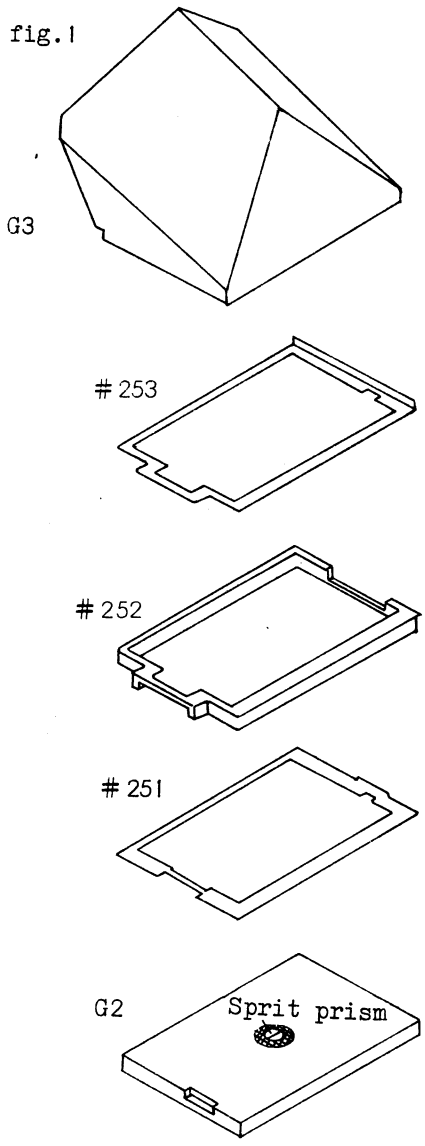


Specified protrusion:
About 0.55mm

(Last 0 of 1000 should touch frame edge line)

㉕ Reassembly of focusing screen and penta-prism

fig.1

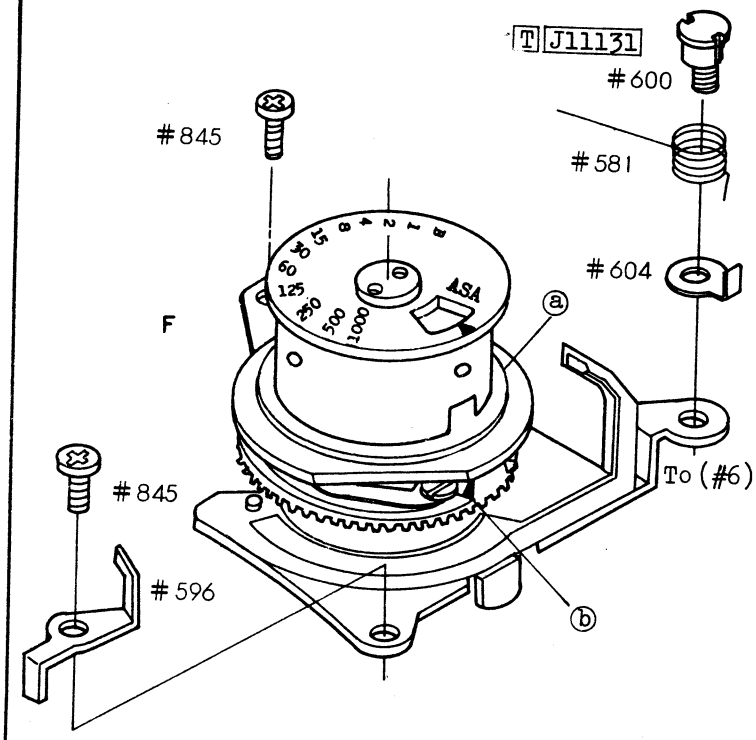


Focusing screen G2
↓
Viewfield mask #251
↓
Spacer #252
↓
Prism mask #253
↓
Penta-prism G3

[N] Take care of setting in correct direction.

↓
Prism retainer sheet #232, penta-prism retainer N2
↓
Prism retaining spring #233×2

㉖ Attaching of functional control unit



Front plate (#6)

↓

Functional control F, ⊕#845×1

R Perform assembly, setting shutter dial indications to actual shutter speeds.

N Make certain of the angular compensation 2.5°.

↓

Lug #604, spring #581, control unit base screw #600

R Attach spring #581 so that it touches part ⓐ.

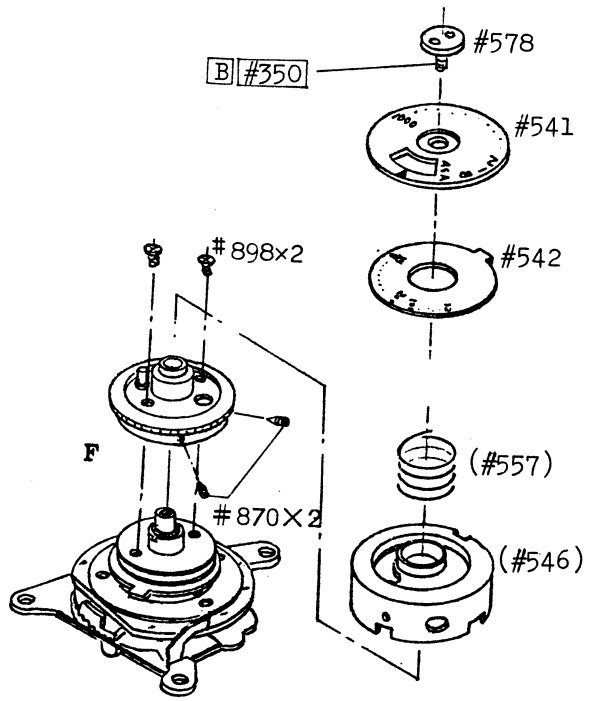
↓

FRE stopper #596, ⊕#845

R Attach FRE stopper #596 in the position where the end surface of the stopper comes against the limit step ⓑ of F-gear.

A For positioning FRE, refer to paragraph ㉘ .

㉗ Attaching of ASA dial and T-dial



Clatch F, ⊖#870×2

↓

T-dial mount ring (#546)

↓

T-dial spring (#557)

↓

ASA dial #542

↓

T-dial #541

↓

Dial top screw #578

(28) Positional adjustment of FRE by FRE stopper

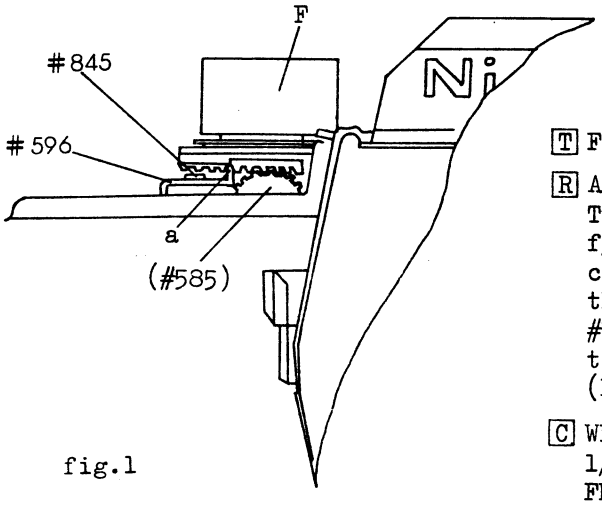


fig.1

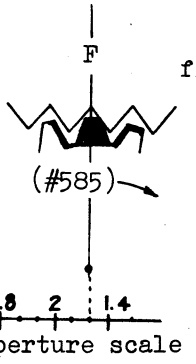

fig.2 fig.2

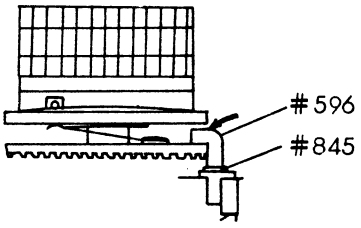

fig.3

T F-figure check gauge (AI) J18065

R Attach the gauge to the camera bayonet. Turn the aperture ring from f/1.4 to f/2, and set it to the first 1/3-step click position. At this time, adjust the attaching position of FRE stopper #596, and bend it at the position a, to ensure no movement of FRE gear F. (Refer to fig.1)

C When aperture ring starts turning from 1/3-step click position to f/2 side, FRE gear F should immediately move. (Refer to fig.2)
Even though aperture ring is turned to f/16 and returened to f/1.4, idle gear-C (#585) should not disengage from FRE gear F.

A If the disengagement takes place, bend the top of FRE stopper #596 as indicated by the arrow in fig.3.

N While coupling piece #209 is being turned 2.5° (corresponding to 1/3-step) on aperture ring) from specified angular position 52.5°, only front pinion #590 which engaging to aperture coupling ring, should rotate, and gear #588 should not rotate (for realizing full-aperture compensation).

(29) Adjustment of T-dial and ASA dial

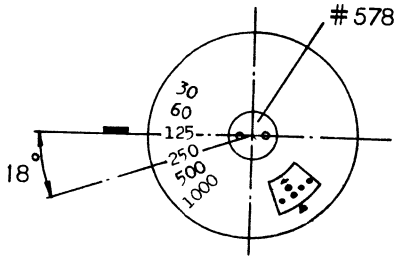

fig.1

[A] Once releasing dial top screw #578, bring any figure on ASA scale to the index , and also shutter speed scale to index line on camera top cover. Fasen up the screw. (Angle for one step on T-dial is 18°, and that for 1/3 step on ASA dial is 6°.)

Correcting the resistance of FRE

[T] Digital VOM J9003-2, F-figure check gauge (AI) J18065

[C] Connect the test leads to FRE printed lead (#572) and lug where connected with lead #154, make measurement resistance of FRE for each EV. (fig.3)

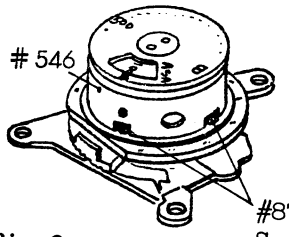

fig.2

Resistance at ASA 100 should be as below for each EV:

EV	Shutter speed / f-number	Max. (kΩ)	Standard (kΩ)	Min. (kΩ)
1	B / f/2	0.51	0.45	0.38
9	1/15 / f/5.6	8.80	7.65	6.50
15	1/500 / f/8	15.01	13.05	11.09

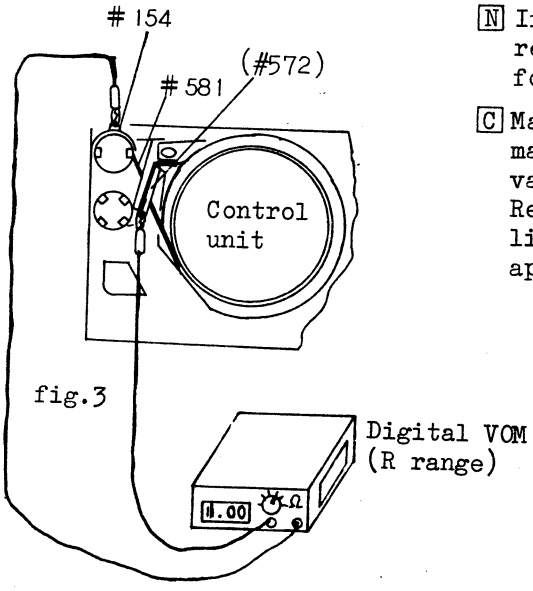

fig.3

[N] If it differs from above specified value, release set screws #870×2, and rotate FRE, for adjustment. (fig.2)

[C] Manipulating aperture ring and shutter dial, make sure of continuous change of resistance value (without jump and standstill). Resistance should not differ from specified limit, depending upon rotating direction of aperture ring.

(30) Attaching of IC printed circuit

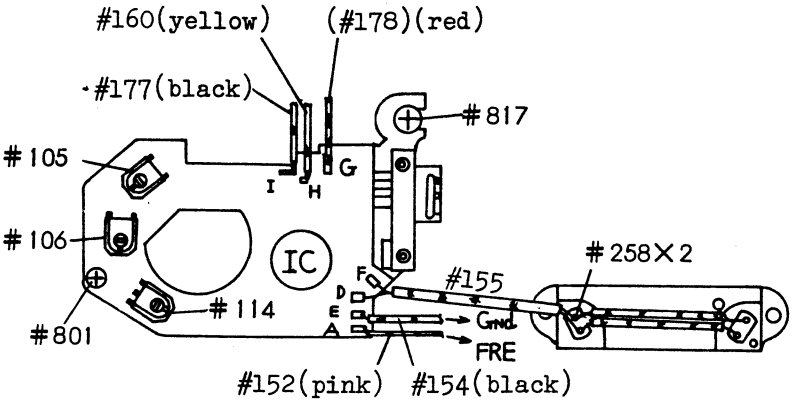

fig.1

IC printed circuit, ⊕#801×1, ⊕#817×1

↓

N When inserting exposure mark film #242 into opening of viewfield frame, be careful not to make scratch. For positional adjustment of the film, refer to fig.3.

Eyepiece mold N4, ⊕#839×2

↓

N Each photo-diode #258 is to be arranged so that the dot on its cathode side is pointed respectively, as shown in fig.2.

B #350

↓

Soldering of leads #160(yellow), #178(red), #154(black), #177(black), #152(pink)

N For soldering position of each lead, refer to fig.1.

N After soldering, remove remnant of flux, using a liquid cleaner (alcohol/ether), and apply moisture proofing coat (silicone) to each soldering part.

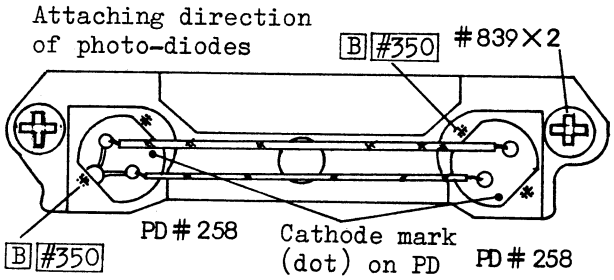

fig.2

Cautions to be taken in handling and soldering IC printed circuit:

As compared with conventional exposure meters, the present one measures extremely minute corrent. Thus, since the circuit requires an extremely high input impedance, the IC is unavoidably liable to be injured.

1) Soldering iron should ensure electrical insulation, and provided with a grounder lead.
2) IC printed circuit is not to be touched with bare hands. Put on gloves, when handling.
3) Do not make solder bridge.

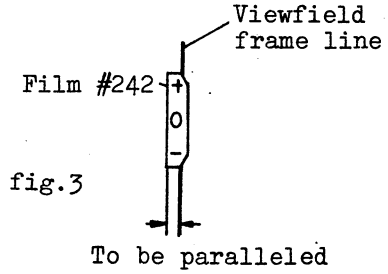

fig.3

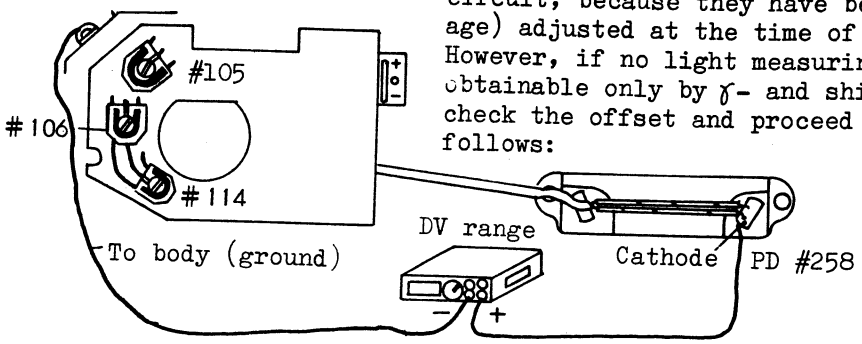
Positioning of exposure mark film #242

A For adjusting protrusion of the film #242 into viewfield, release screws ⊕#801 & ⊕#817, and move the whole IC printed circuit (M).

N Side edge of the film should be parallel to viewfield frame, and markings + 0 − not be cut-off by the frame.

(31) Adjustment of light measuring accuracy



As a rule, do not attempt to adjust IC printed circuit, because they have been offset (voltage) adjusted at the time of assembling. However, if no light measuring accuracy is obtainable only by γ- and shift-adjustment, check the offset and proceed to adjustment as follows:

Basic method

1) Offset voltage adjustment at EV 15

Specified allowance: within ±0.5mV
(Try to approach zero as far as possible)

Measuring method

[T] Digital VOM with input impedance 1000MΩ or more and resolving power 10μV or higher
Connect the meter as shown in fig. above.

[T] Light measuring box J1804-1 with 50mm/1.4 lens, tool cover J15138 and screwdriver J5129

[A] ① Set ASA to 100, shutter speed to 1/500, and aperture to f/8.

② Using light measuring box, make adjustment at EV15 by means of VR #114, so that the voltage becomes to within ±0.5mV.

[N] Part connected to meter's ⊕lead being coated with a moisture proofings (silicone), remove this using a liquid cleaner (alcohol/ether).
After connection, let finger off from meter leads to ensure correct measurement.

2) γ-adjustment (At EV 15)

Measuring method

Using 50mm/1.4 lens, set ASA to 100, shutter speed to 1/500sec. and aperture to f/8.

\+ ○
○ ● Control VR #105 so that only this LED lights.
− ○

[N] ● represents lighting of LED

3) Shift-adjustment (At EV 4)

Measuring method

Using 50mm/1.4 lens, set ASA to 100, shutter speed to 1/2sec. and aperture to f/2.8.

\+ ○
○ ● Control VR #106 so that only this LED lights.
− ○

4) Checking all accuracies at EV 4, 6, 9, 11 and 15

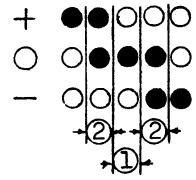
Measuring method

Using 50mm/1.4 lens, set ASA to 100, setting shutter speed and aperture to all combination values.

Zone-①, correct exposure point ±0.5EV

Dead zone, 0.3—0.6EV

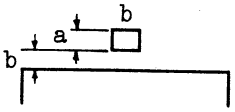
Zone-②, Two-LEDs lighting range = 0.7—1.1EV



[N] Make sure that 5 step indications are accomplished positively. Though the dial or ring is turned within their click slacks or other slacks, no other LED lights.

(32) Positioning of F-figure window in the viewfield

Specified position of F-figure window (0.5~1)b



No remarkable tilting of window relative to viewfield frame is permitted.

•Position of window relative to viewfield frame

Tilted 5.6

[A] Shift F-mask plate #237, or tilt F-mirror holder N1.

Too low 5.6

Too high 5.6

[A] Tighten or loosen F-mirror adjusting screws ⊕#875×2

•Position of F-figure relative to window

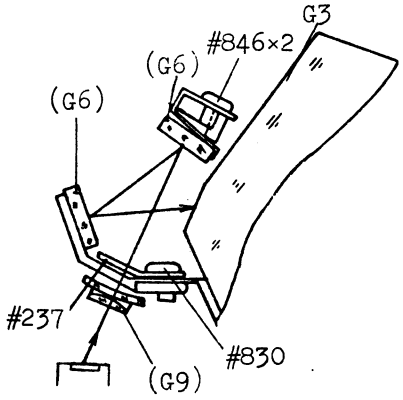
Right-sided 5.6

Left-sided 5.6

Too low 5.6

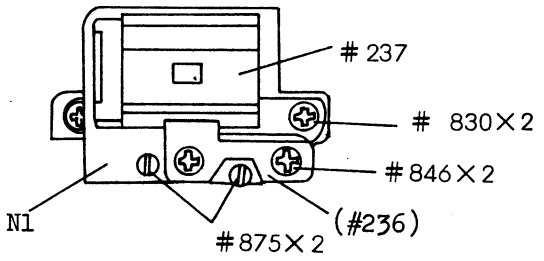
[A] Shift F-mask plate #237

Image of frame line on gauge

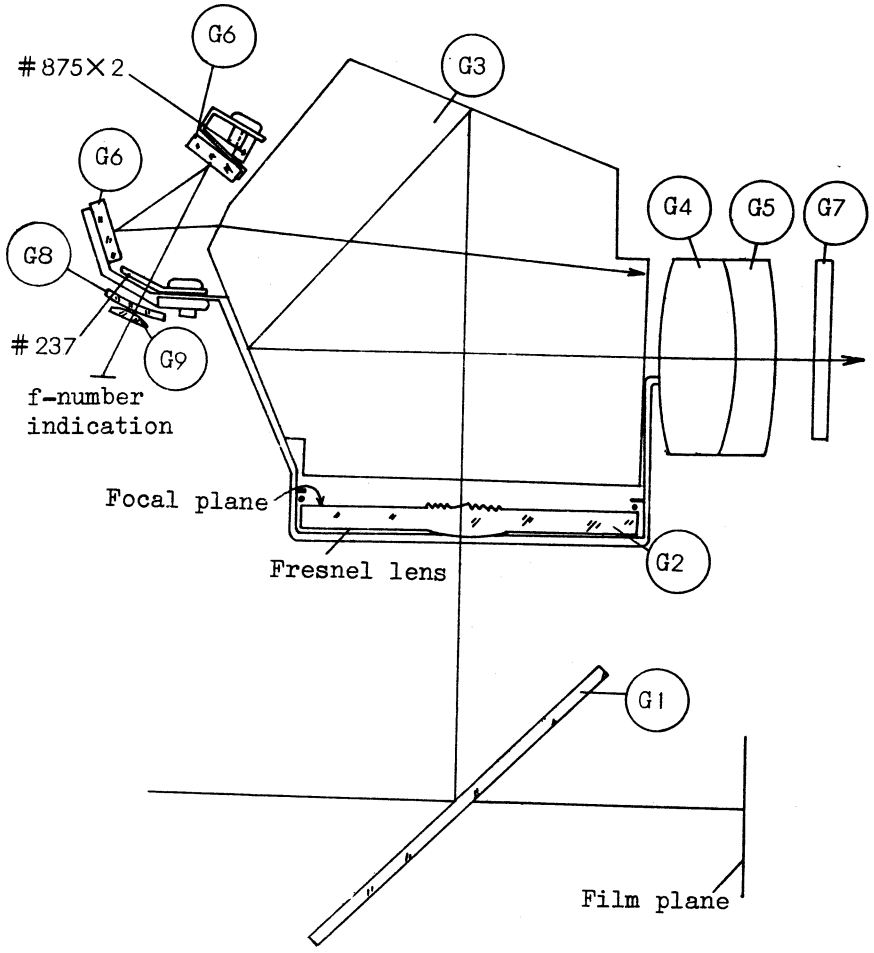


[T] Ordinary AI lens, F-figure check gauge J18065, AI F-figure window check gauge J18063

[C] When checking for correct positin of the window, attach gauge J18063 onto camera bayonet. See that image of window frame line on the gauge appears in the F-figure window.



(33) Optical system of finder

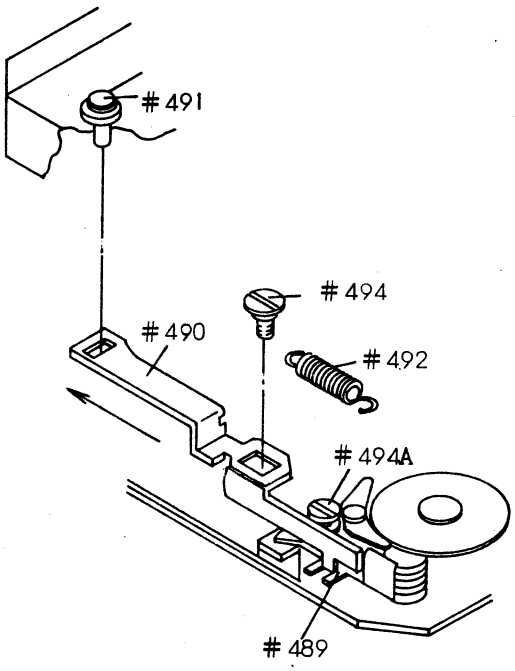


To reduce total height of camera body, focusing screen is provided with focal plane on top and Fresnel surface on bottom.
This Fresnel surface is used simultanously as condenser lens.

Specified diopter of finder: -1 ± 0.5 diopt

(Equipped with K-type focusing screen)

(34) Attaching of multi-exposure arm A



Multi-exposure arm A #490, return spring #492

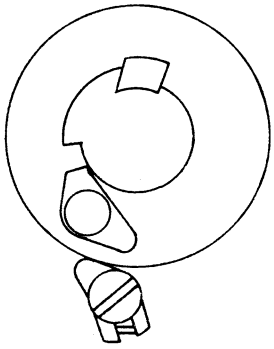
↓

Guide pin #494

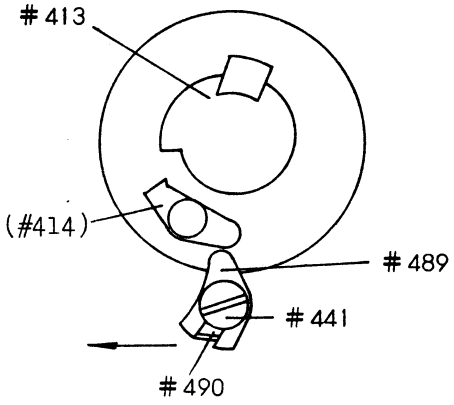
[R] Insert end of multi-exposure arm A #490 into fork of #489. Hook up one end of spring #492 on screw stud #494A and the other end in notch of arm A.

[C] After attaching, push arm A #490 following the arrow, and wind up. At this time, make sure that spool and sprocket do not rotate but shutter charge is positively realized.

Normal position



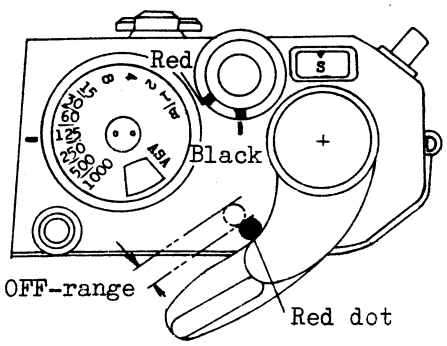
Muti-exposure position



In the position for multi-exposure, make sure that charge cam release claw lever #489 pushes claw (#414), and the claw disengages completely from charge cam #413.

(35) Adjustment of ON/OFF positions of lever switch

fig.1



Specified ON/OFF positions (See fig.1)

ON-range: Beyond red dot diameter

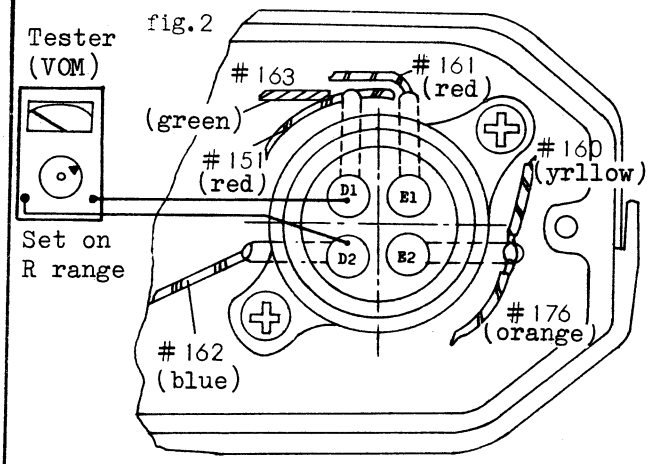
OFF-range: Within diameter assumed the same as that of red dot

[A] Bend lever switch contact A #487 or B #488, so that the switch turns ON and OFF within above specified ranges, respectively.

[N] For checking ON/OFF positions, see that LED lights up/goes off. Lever switch should not be turned OFF, when wind-up lever is in halfway-, complete-wind-up or spring-back position.

Checking for ON/OFF of MD switch

fig.2



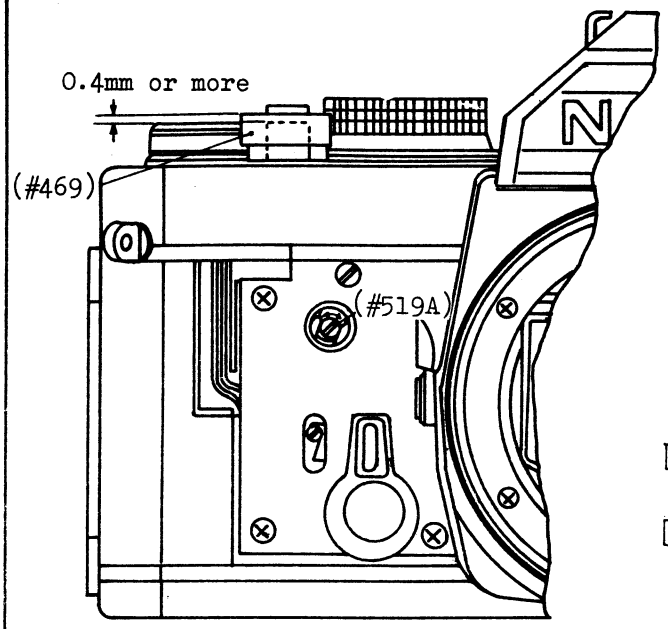
[T] Connect leads of tester (set on R range) to D1 and D2.(fig.2)

[C] In the positions as shown in the following table, check that MD switch is turned ON and OFF positively.

Relative ON/OFF of lever switch and MD wind-up switch, in each operation step

Lever switch	Shutter button ring (Change-over SW)	Wind-up lever	Wind-up position	MD SW	Conduction of D1 across D2
ON	Locked	Pull out	Halfway	ON	No conduction
OFF	Locked	Flush	Halfwsy	ON	Conducted
OFF	Released	Flush	Halfway	ON	No conduction
OFF	Locked	Flush	Complete	OFF	No conduction
OFF	Released	Flush	After shutter released	ON	No conduction
OFF	Locked	Flush	"	ON	Conducted
ON	Locked	Pull out	"	ON	No conduction

(36) Adjusting of releasing position of release button



[T] Micrometer for release button J18002

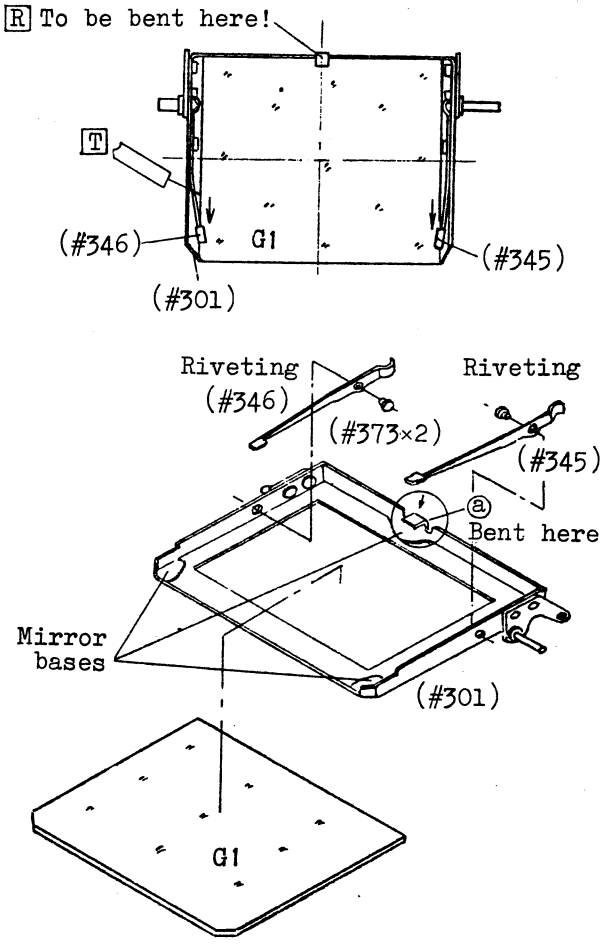
Specified stroke of release button: 2.5 0.3mm

[N] Sutter should be released when the top surface of the button lowered 0.4mm or more from top surface of release button ring (#469).

[A] If not, make adjustment by means of eccenter pin (#519A).

[C] After adjustment, make sure of positive opration of BULB (B).

(37) Replacement of mirror



[D] For replacement of mirror, insert a stick with pointed end between mirror side and mirror retainer A (#345) or B (#346) as shown in lefthand fig., and move it in the direction of arrow to draw out the mirror.

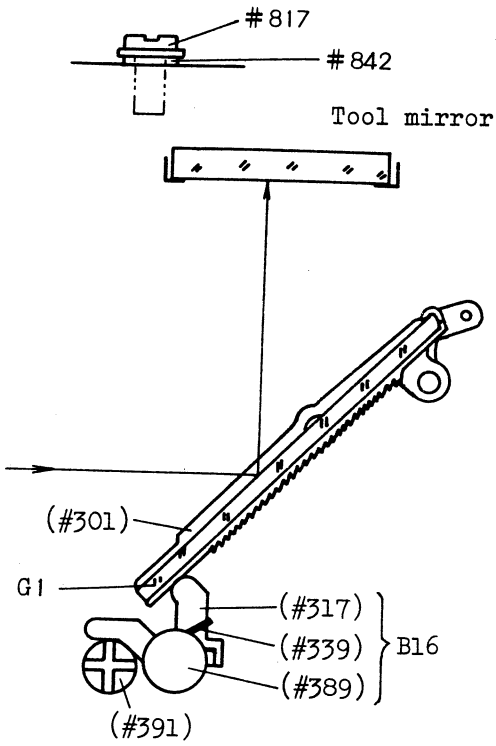
[N] Be careful not to scratch mirror surface and deform mirror retainers A and B.

[R] After inserting mirror into its holder (#301), bend the portion ⓐ of the holder in the direction of arrow as shown in fig.

[N] Take caution not to break mirror.

[C] After replacement, make sure of no one-sided dim focus in four corners of viewfield.

(38) Adjusting 45 of mirror and infinity (∞) coincidence



1) Adjusting of 45°

[T] Optical parallel, tool mirror and vertical-type collimator f=500mm

[A] Place optical parallel onto camera bayonet basis. Inserting tool mirror into prism box #250, take reading of displacement of reflected image in X- and Y-directions on reticle of the collimator.

X-direction adjustment

(Allowance: Within 5')

Adjust vertical movement of 45° stopper B16 by means of 45° adjusting pin (#391).

Y-direction adjustment

(Allowance: Within 10')

According to displacement, change adjusting washer #842a—u (t=0.05—1.2mm) under prism box. (#842a—u for 32FB are utilized.)

Allowance of deformation (indistinctness): Within 5'

[N] No difference of above displacements or deformation before-and-after wind-up and by releasing the shutter several times are permitted.

2) Infinitiy (∞) coincidence adjustment

[T] Reference lens 50mm/1.4, horizontal-type collimator f=500mm

Specified coincidence: ±30'

[A] Make adjustment by changing adjusting washers #842a—u at 4 points uniformly under prism box.
For fine adjustment, use eccenter pin (#391).

3) Picture field adjustment

[T] Reference lens, picture field chart and its stand, focusing glass

Allowable parallax (in vertical and lateral directions on the aperure plane: Within 0.5mm

Inclination of viewfield in relation to chart image: Within 1°30'

7. TROUBLE SHOOTING

(1) Causes of mechanical faults

Item	Fault	Conceivable cause	Action to be taken
Winding-up	Incorrect returning of wind-up lever	Getting out of place or break of lever returning spring #406	Reattaching or replacement of spring
	Heavy winding-up or squeaking	∘Spool washer (#455A) short of oil	Apply grease G7100
		∘Attaching screws #807 for lower bracket (#452) loosened	Fasten #452 in position with #807 at a smoothly rotating position of spool shaft A9
		∘No thrust slack provided for spool shaft A9	Selecting of washer #897A--C
	Winding-up impossible	∘Entrance of extraneous substance	
		∘Shutter does not operate	Replace the shutter
		∘Pendulum #462 and/or ratchet cam A10 seized	Positional adjustment of pendulum
		∘Sprocket stopper cam setscrew loosened	After positioning, refasten the setscrew
		∘Incorrect return of release shaft #527 together with MD release shaft	
		∘Movement of self-timer seized	Remove scraps, etc. if any, from self-gear, or replace shutter
		∘Incorrect mirror charge	Adjustment of charge
	Invalid wind-up	Blank shot check lever #26 does not operate	Strengthen pushing of MD wind-up switch contact B #907, or apply grease G7100 Strengthen MD signal lever spring #30 Provide MD signal lever shaft with slack
	Occasional invalid winding-up	Getting out of place of charge cam claw spring #412	Reattaching of the spring
	Multi-exposure does not operate	∘Getting out of place of return spring #492	Correct attaching of the spring
		∘Getting out of place of top end of arm A #490 from fork of lever #489	Bending of top end of #490
		∘Getting out of place of knob #491 from hole on arm A #490	Bending of the hole end of #490
	Incorrect position of sprocket	∘Displacement of sprocket collar A nut #437	Readjustment (Refer to Inspection Standards)
		∘Loosen of screw #824	

Item	Fault	Conceivable cause	Action to be taken
Winding-up (continued)	Too large slack of sprocket at wind-up limit	∘ Displacement of sprocket stopper cam #429	Readjustment
		∘ Incorrect movement of sprocket stopper A12	Readjustment
		∘ Cutting off of stopper spring #496	Replacement
	Reversal prevention not effective	∘ Too weak claw spring (#445)	Adjustment of spring pressure
		∘ Seized movement of claws A (#443) and B (#444)	Adjustment or replacement
	Picture frame not advanced	∘ Too early releasing of pendulum #462	Adjustment
		∘ Incorrect position of sprocket	Adjustment
		∘ Too weak friction of spool	Adjustment (Refer to Inspection Standards)
	Incorrect charge of shutter	∘ Tilting of charge lever pin #22	Replacement
		∘ Inappropriate bending of shutter charge claw #37	Correct bending or replacement
		∘ Too early relreasing of pendulum #462	Adjustment
	Incorrect mirror charge	∘ Inappropriate bending of top end of mirror charge lever B11	Correct bending or replacement
		∘ Incorrect movement of mirror down latch lever #330	Apply grease G7100
		∘ Too early releasing of pendulum #462	Adjustment
Picture frame counter	Incorrect advance	∘ Incorrect position of counter eccenter axle #516	Readjustment of position of the axle
		∘ Getting out of place of spring #521	Correct attaching
		∘ Too large slack or incorrect movement of advance claw (#510)	Adjust slack by means of axle #512
		∘ Incorrect shapes of teeth of ratchet #532	Replacement
	Incorrect return	∘ Getting out of place of spring #521	Correct attaching
		∘ Incorrect movement of ratchet claw #506	Adjustment by means of claw nut
Shutter release	Shutter release button cannot be pushed	Incorrect movement of lock lever #464	Apply oil, or provide a slack by means of lock lever axle #539. Strengthen lock lever spring #465
	Too early or late releasing of shutter	Incorrect adjustment of release lever axle #519A	Readjustment (Refer to "Inspection Standards")

7. TROUBLE SHOOTING

Note: The parts enclosed with (#) are not available individually.

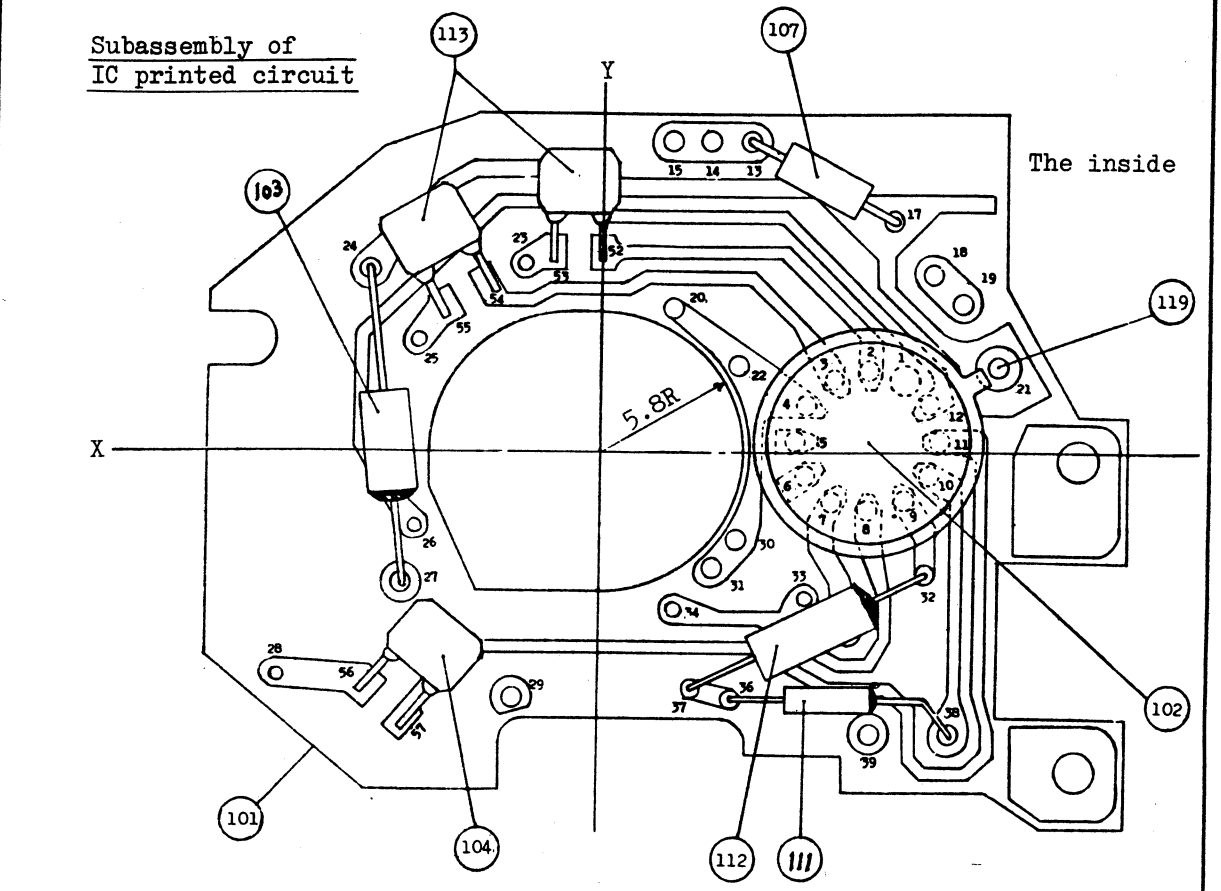
Item	Fault	Conceivable cause	Action to be taken
Shutter release (continued)	Shutter releasing seized	∘ Seizure between release lever fork #518A and release lever guide pin #879	Apply grease G7100, or grind off engaging surface with oil-stone
		∘ Seizure between release lever pin #519A and release lever fork #518A	Apply grease G7100, or grind off engaging surface with oil-stone
		∘ Seized engagement of mirror-up lever (#322) to mirror-up stop lever #329	Apply grease G7100, or grind off engaging surface with oil-stone
Mirror box	Too large sound by mirror-up impact	∘ Air damper not effective	Replacement of air damper
		∘ Getting out of place of cushion rubber #372	Reattaching
		∘ Getting out of place of down lever cushion rubber #363	Correct attaching
		∘ Too weak or strong rear brake spring #286	Adjustment
		∘ Slackness between mirror holder B26 and mirror G1	Bend mirror retainers, or replacement of mirror holder
	Incorrect clearance of mirror-up	Incorrect adjustment of eccenter-pin (#356)	Readjustment
	Mirror-up occurred by attaching lens	Insufficient height of aperture coupling lever B10 Specified : $3.1^{+0.1}_{-0}$mm Difference between before-and-after wind-up : 0.15mm	Adjustment of before-and-after difference by down lever eccenter #367 Adjustment by eccenter pin (#356) Bend aperture coupling lever (#315) to some extent
Self-timer	Setting impossible Shutter is not released Stops on the way	∘ Poor shutter	Replacement
		∘ Movement of self-timer axle B2	Apply grease G7100
	Not cancelled by returning of self-timer lever to original position	Poor shutter	Replacement
Shutter	No correct time obtained	Poor shutter	Replacement
	Movement of curtain seized	Poor shutter	Replacement
	Rear curtain does not return	Too strong brake spring #286	Adjustment
Synchronization	Incorrect time lag	∘ Incorrect clearance of X-contact points	Adjustment of the clearance
		∘ Poor shutter (times or X-contact)	Adjustment or replacement

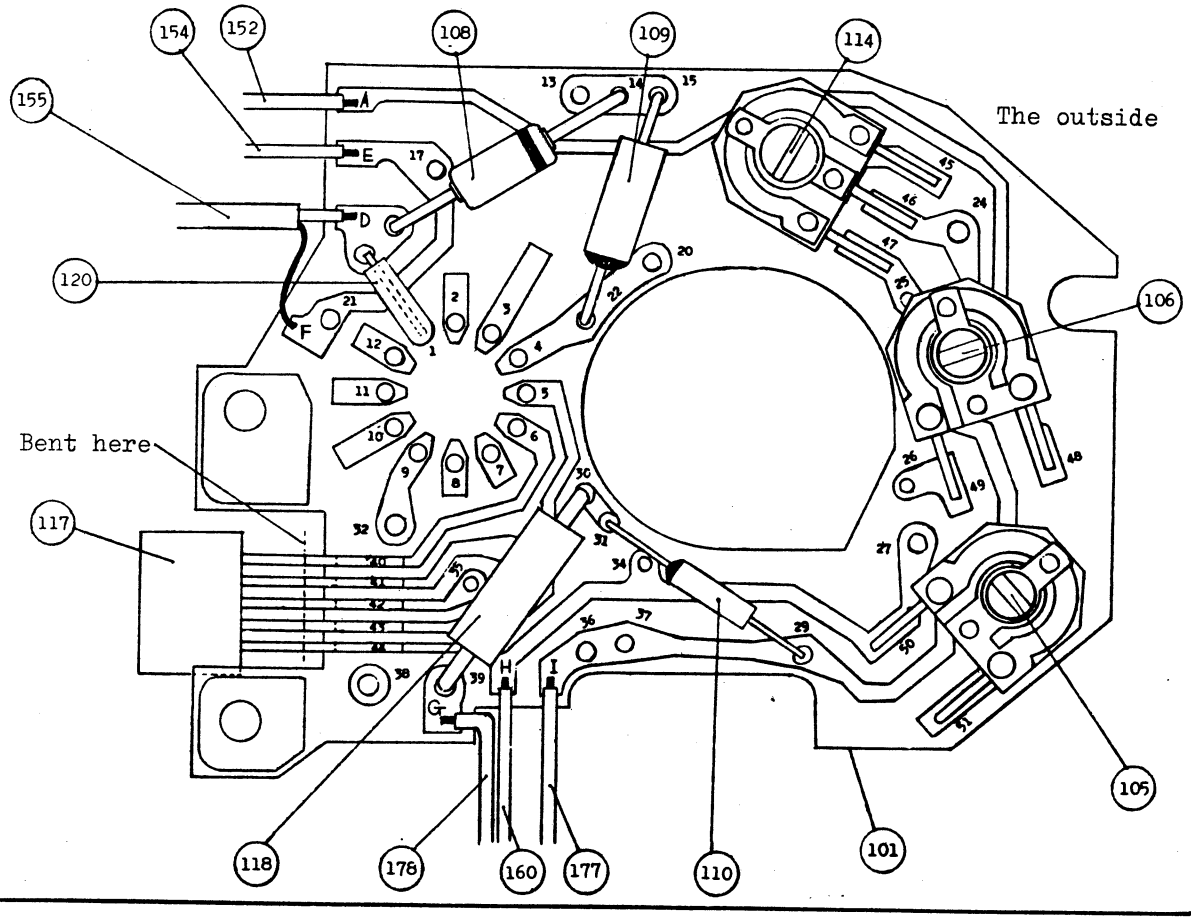
Item	Fault	Conceivable cause	Action to be taken
Synchronization (continued)	Poor insulation	∘Poor sync socket #15	Replacement
		∘Poor shutter	Replacement
		∘Poor insulation of sync contact C	Replacement
		∘Poor insulation of lead wire #175	
		∘Poor soldering of X-contact terminals	
	No conduction	∘Poor shutter	Adjustment or replacement
		∘Disconnection of lead #175	Replacement
		∘Poor sync socket #15	Replacement
		∘Poor contact of #69 with #70	Cleaning or replacement of the contact
		∘Poor conduction between contact #69 and sync contact (#75)	Cleaning or replacement of the contact
Aperture coupling ring	Movement seized, uneven or heavy	∘Incorrect attaching of lens mount B3	Reattaching to smoothly moving position of coupling ring
		∘Incorrect fitting of lens mount B3 to aperture coupling ring B4	Selection of fitting of B3 to B4
		∘Too deep engagement or disengagement of idle gears A, B and B28 with gear #588	Adjustment of engagement
		∘Too deep engagement of idle gear (#585) with FRE gear (F4)	Adjustment of engagement
		∘Shutter top cover #62 rises, touching with brush base plate (#564)	Bending of #62
	Incorrect start position of coupling piece	Displacement of coupling ring stopper #222	Readjustment
Rewind button	Cannot be set	∘Incorrect movement of AR-lever #537	Apply grease. Strengthen AR lever spring #537B. Provide slack to AR lever axle #537A
		∘Heavy movement of sprocket shaft #434	Apply grease, or replacement
	Incorrect return	Incorrect movement of AR-lever #537	
Rewinding	Heavy or uneven	Squeaking between rewind shaft #652 and rewind shaft guide #665	Replacement
Shutter dial	Heavy, uneven or too light turn	∘Poor shutter	Replacement
		∘Incorrect stretching of string	Restretching of string

Item	Fault	Conceivable cause	Action to be taken
Shutter dial (continued)	Heavy, uneven or too light turn	∘Incorrect rotation of click pulley #571	Apply grease G8181 to click groove and click holes
		∘Poor functional control unit	Replacement
		∘Incorrect rotation of T-pulley F7	Replacement
	Displacement of speed indication	Incorrect adjustment of control unit	Readjustment
ASA dial	Displacement of ASA indication	Incorrect adjustment of control unit	Readjustment
Viewfinder	T-film not moved	Cutting off of string #599	Replacement
	Movement of T-film seized	∘T-film (#621) touches finder frame	Change washer #624, refer to 6.-(2)-(24)
		∘Getting out of place of T-film spring #623	Correct attaching
	Decentration of T-film indication	∘Decentration of T-film (#621)	Replacement
		∘Incorrect wreathing of string on T-film string spool (#617)	Adjustment
		∘Attaching of adhesive on T-film string #599	Remove adhesive or replacement
	Displacement or tilt of aperture indication window	∘Poor T-dial pulley F7	Replacement
		Incorrect adjustment	Readjustment
	Displacement of exposure mark	∘Incorrect attaching of exposure mark film #242	Reattaching
		∘Incorrect attaching of IC printed circuit M	Reattaching
	Incorrect infinity (∞) coincidence	∘Incorrect adjustment	Adjustment
		∘Displacement of 45° stopper B16	Replacement
		∘Slackness between mirror holder and mirror G1	Correct retaining, or replacement of mirror holder
		∘Too weak of mirror spring (long) #378	Strengthen or replacement
	Cutting off of viewfield	∘Incorrect 45° of mirror	Readjustment
		∘Incorrect attaching of prism box #250	Readjustment
MD switch	Poor conduction of MD socket	∘Poor contact of MD socket pin	Adjustment
		∘Poor contact of MD wind-up switch A5	Cleaning or adjustment of contact pressure
		∘Poor contact of MD switch K	"
		∘Disconnection of leads #162, #163 or #164	
		∘Heavy movement of MD switch stopper P4	Adjustment of spring #476

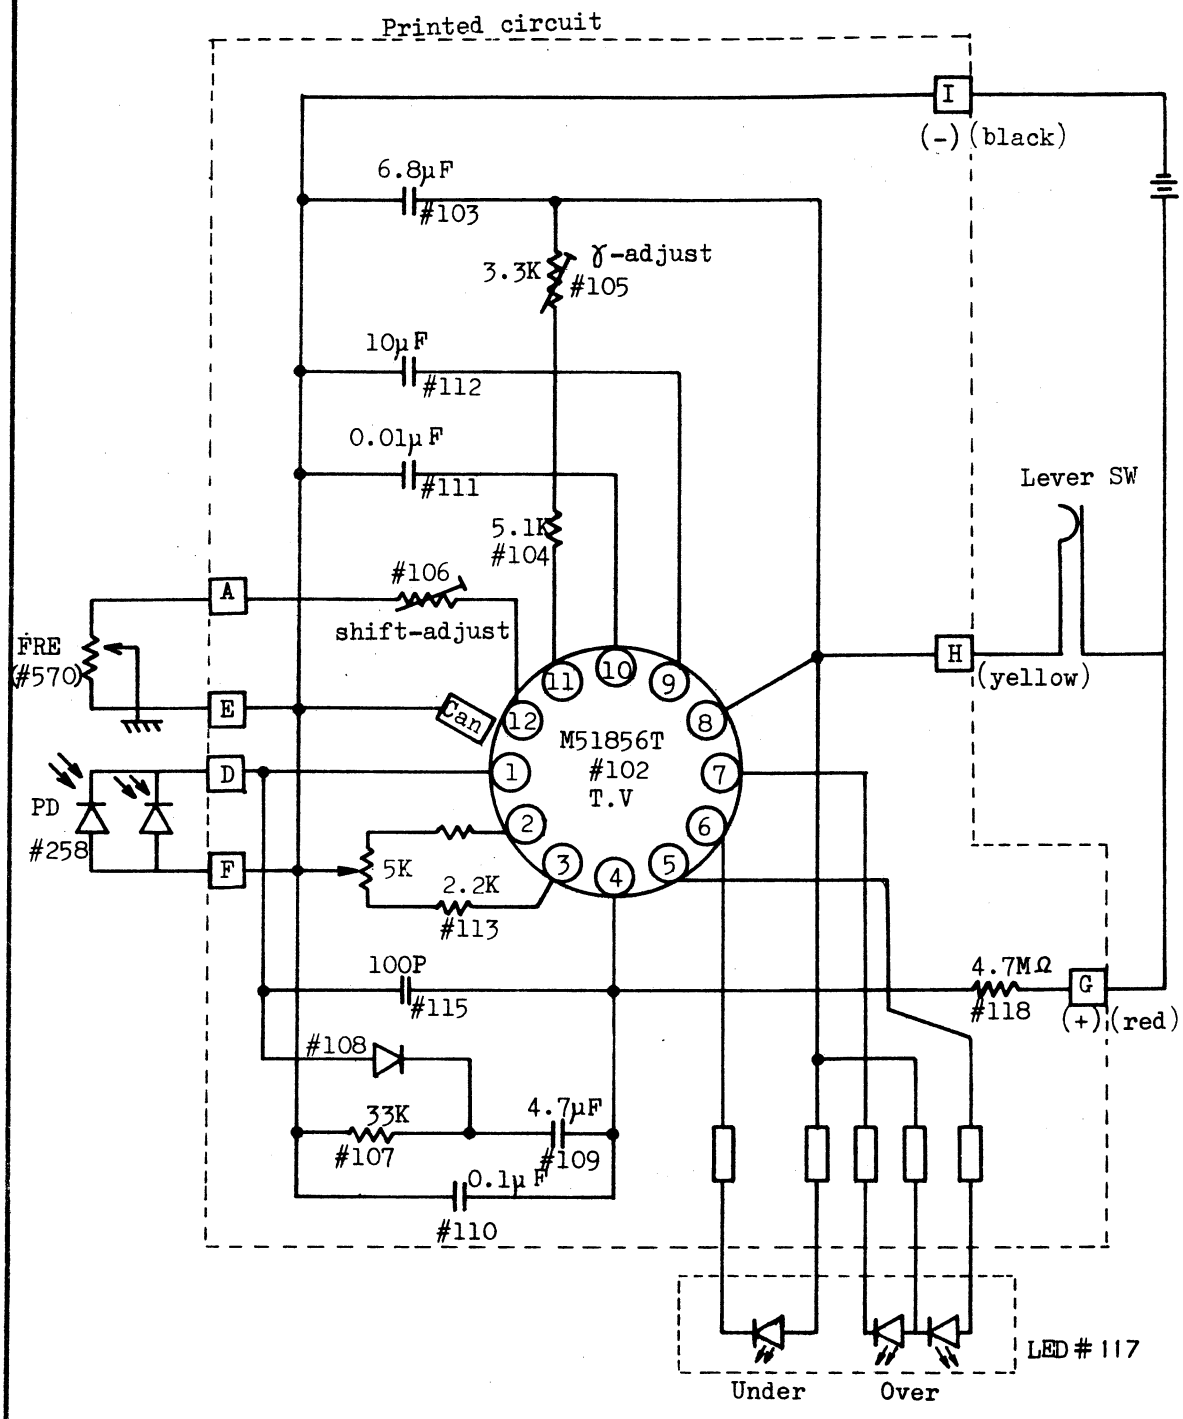
(2) Causes of electrical faults

Subassembly of
IC printed circuit

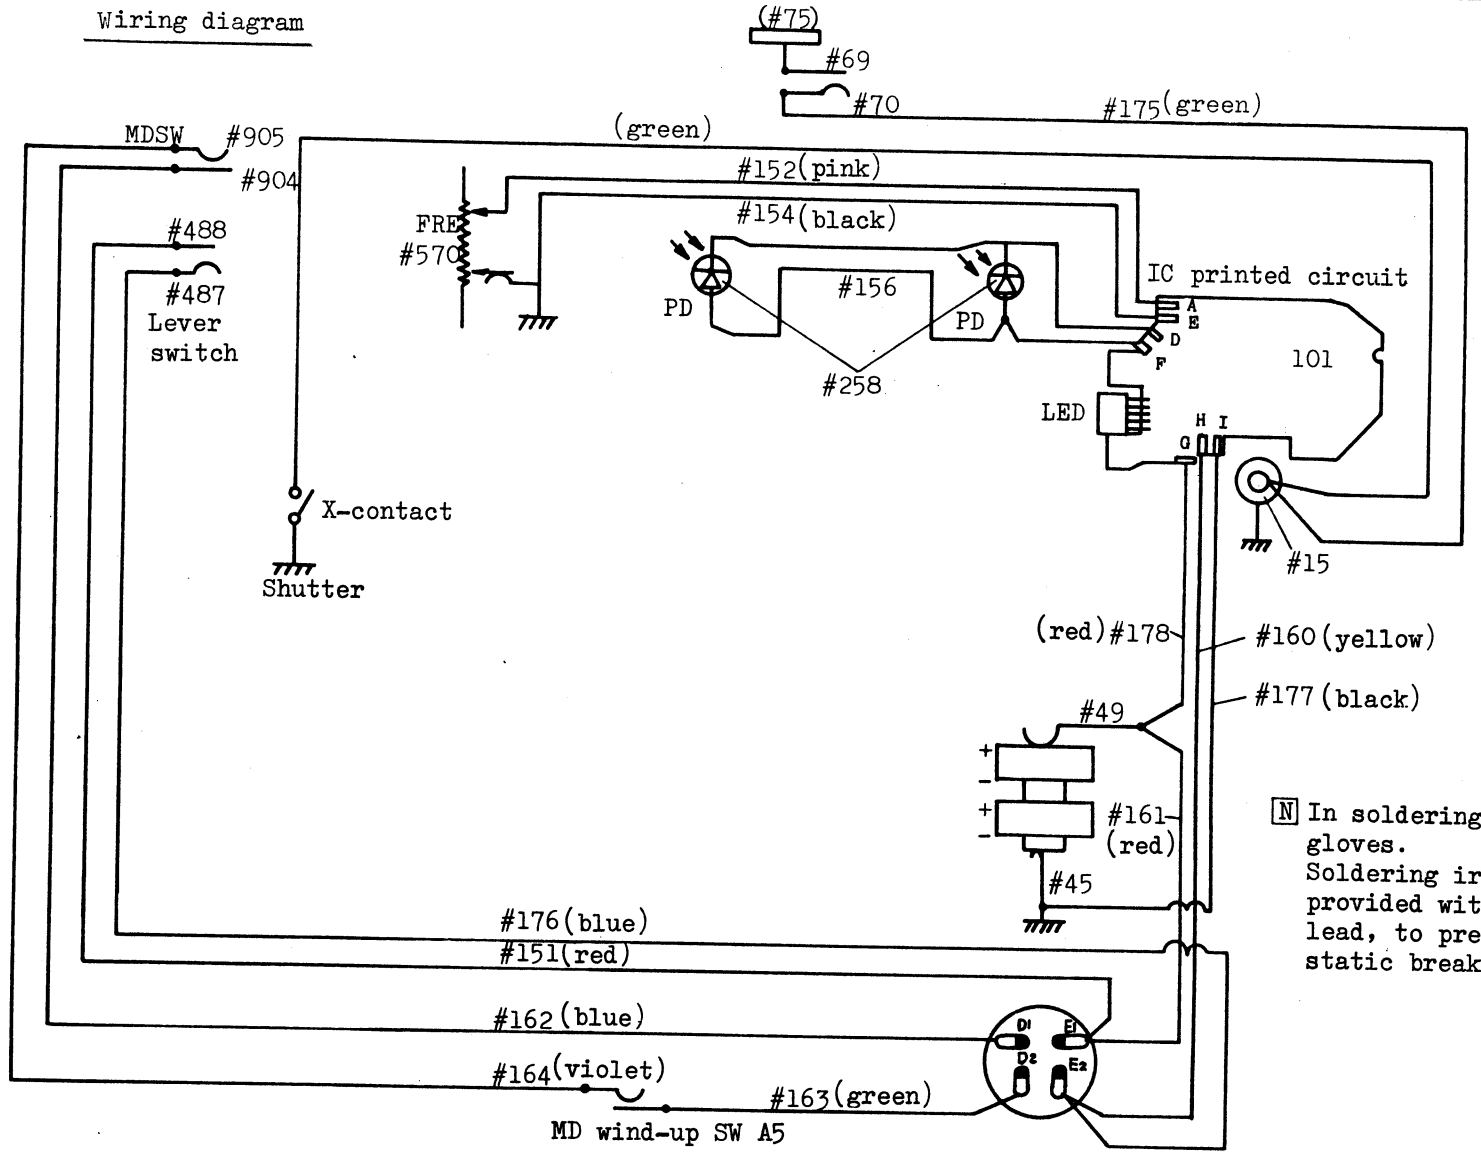




Light measuring circuit



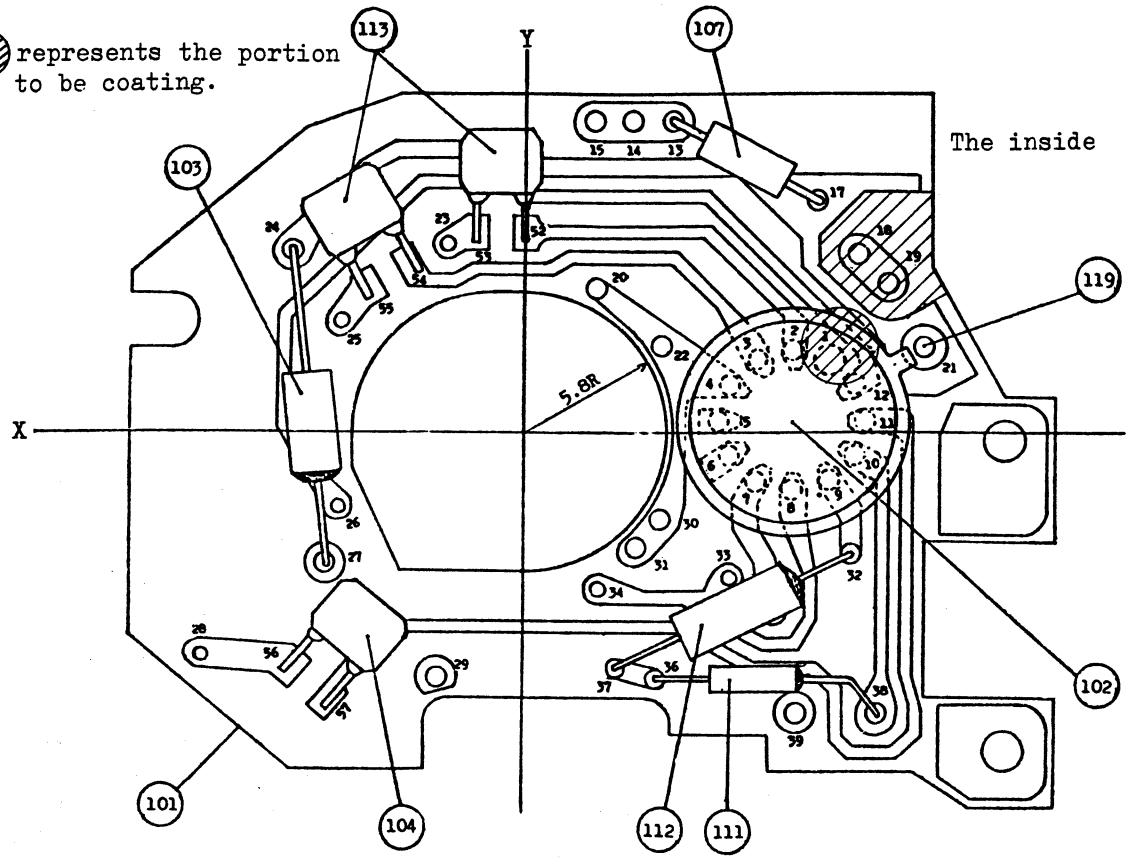
Wiring diagram

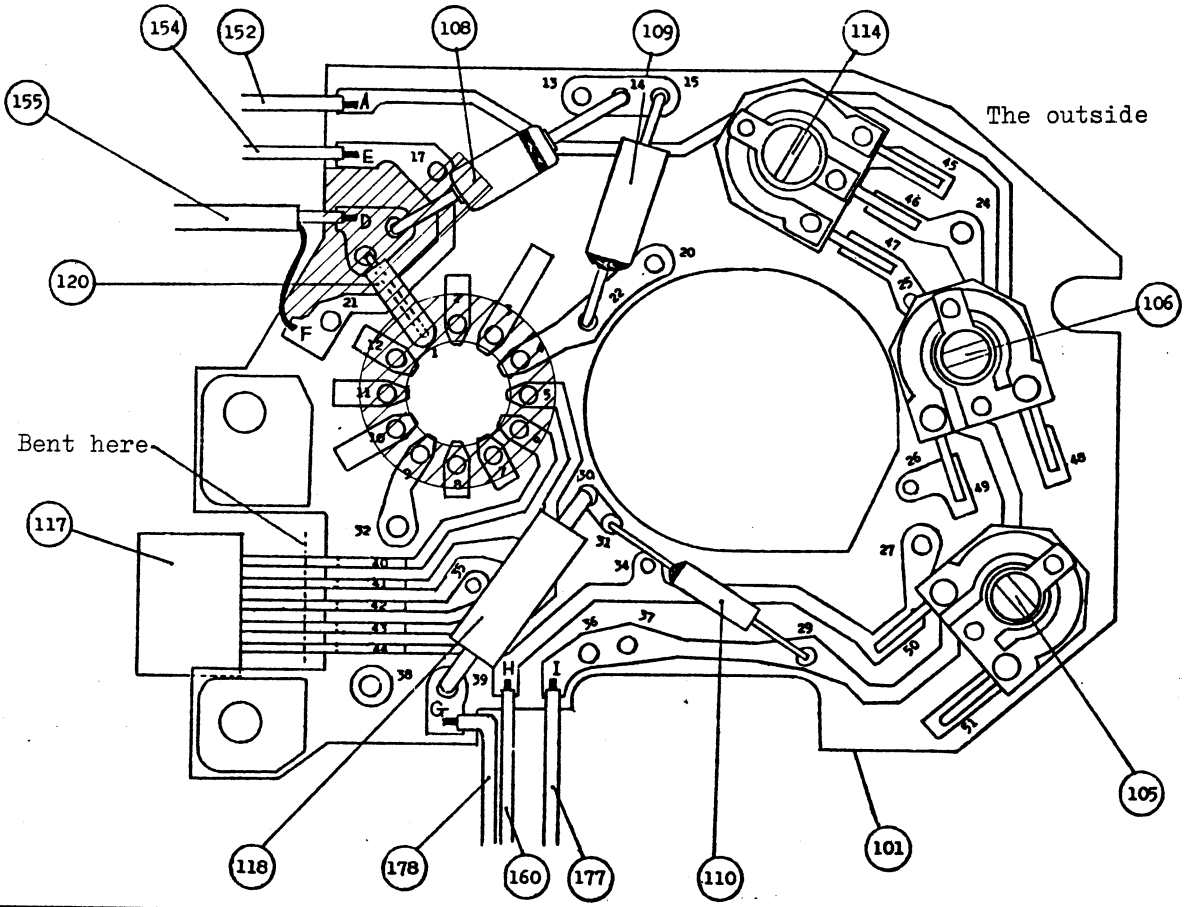


N In soldering, put on cotton gloves.
Soldering iron should be provided with a grounder lead, to prevent electro-static breakdown of IC.

Moisture-proof coating

represents the portion to be coating.

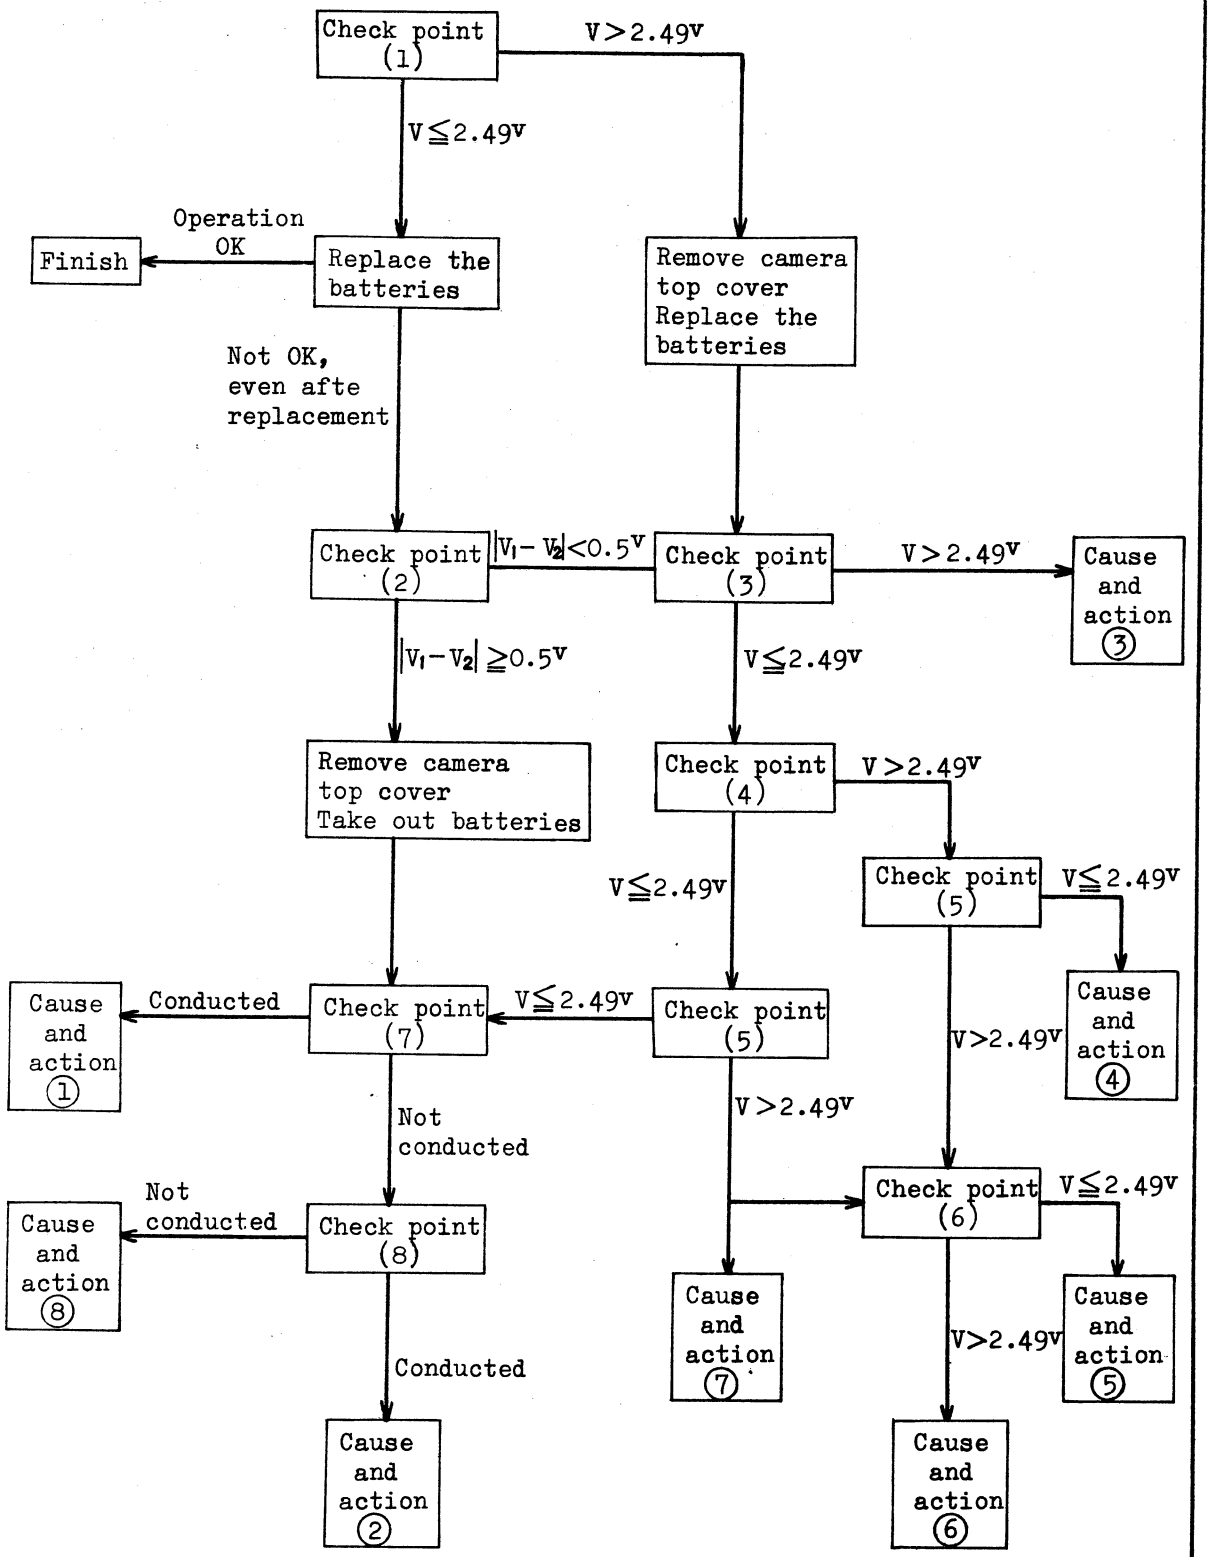




Flow charts and trouble shootings

1). None of three LEDs emit light

Flow chart for checking



Trouble shooting correspond to chart-1)

	Check point
(1)	Make sure of voltage of battery, using the circuit as shown below  Note: Use such a voltmeter as of impedance 50kΩ or higher
(2)	Make sure of disconnection or short of lead wires by measuring V_1 and V_2, using the circuit as shown below, with lever switch turned ON (3)	Check the voltage between land Ⓗ and Ⓘ (grounded). Use new batteries, with lever switch turned ON
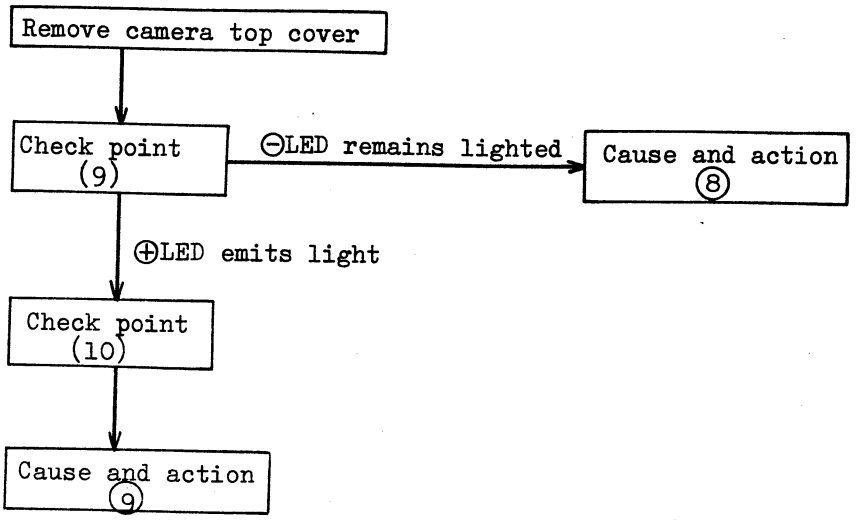
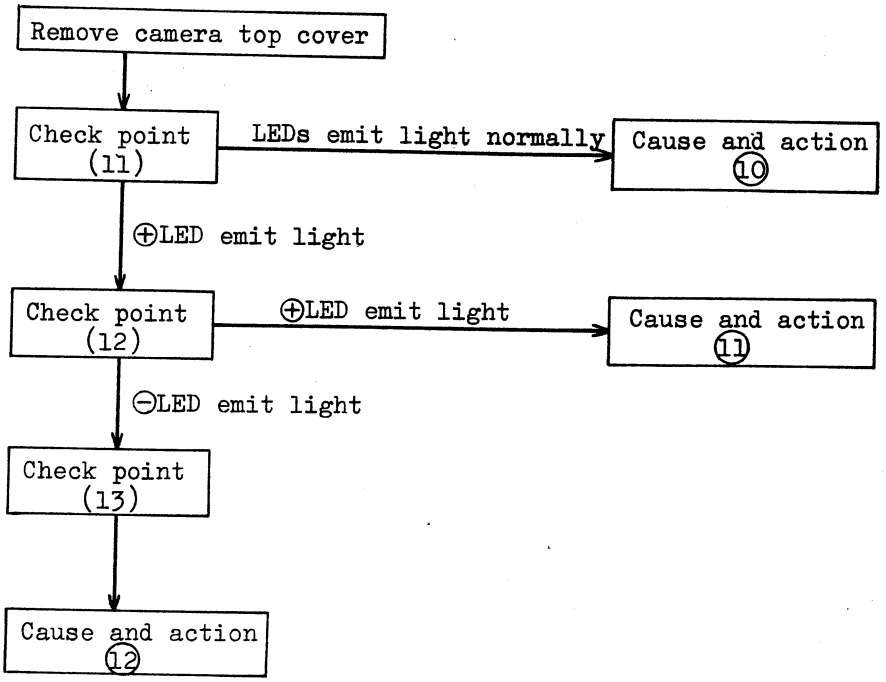
(4)	Check the voltage between land Ⓖ and Ⓘ (grounded). Use new batteries, with lever switch turned OFF
(5)	Check the voltage at MD socket pin E_1
(6)	Check the voltage at MD socket pin E_2, with lever switch turned ON
(7)	Check the conduction between the end of yellow lead (#160) removed from land Ⓗ and land Ⓘ (With lever switch OFF)
(8)	" (With lever switch ON)

	Cause	Action
①	Contact of yellow lead (#160) or orange lead (#176) with body, caused by peeling off of the insulation	Replacement of yellow lead (#160) or orange lead (#176)
	Contact of soldered part of E_2 with body	Remove such contact
	Contact of switch contact A (#487) with body	Remove such contact
②	Contact of red lead (#151), (#161) or (#178) with body, caused by peeling off of the insulation	Replacement of #151, #161 or #178
	Contact of soldered part of E_1 with body	Remove such contact
	Contact of switch contact B (#488) with body	Remove such contact
	Contact of soldered part of battery ⊕contact B (#49) with body	Remove such contact
③	Poor printed circuit	Replacement of printed circuit
④	Disconnection of red lead (#161)	Replacement of the lead #161
	If red lead (#161) is conducting, poor soldering of battery ⊕contact B (#49) or of E_1 conseivable	Resoldering of #161 or E_1
⑤	Disconnection of orange lead (#176) or red lead (#151)	Replacement of #176 or #151
	Poor contact of lever SW contacts (#487 and #488)	Replacement of the contact
⑥	Disconnection of yellow lead (#160)	Replacement of the lead #160
	If #160 is conducting, poor soldering of E_2 conseivable	Rescldering of E_2
⑦	Disconnection of red lead (#178)	Replacement of the lead #178
	If #178 is conducting, poor soldering of battery ⊕contact B (#49) conseivable	Resoldering of the contact B
⑧	Poor printed circuit	Replacement of printed circuit

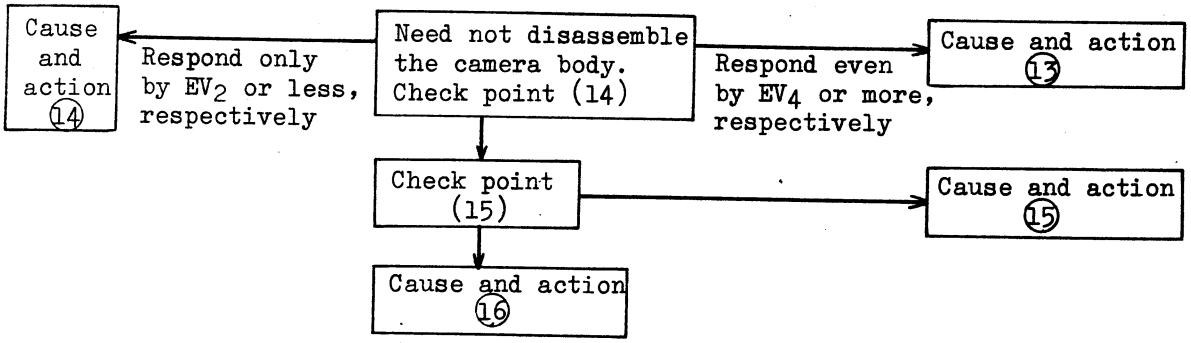
2). ⊖LED remains lighted



3). ⊕LED remains lighted



4). ⊕ and ⊖LEDs respond to a brightness, respectively



Trouble shooting correspond to chart-2)

	Check point
(9)	Try short of pink lead #152 and soldered part of FRE printed sheet (#572) to body (0v)
(10)	Measure the resistance between soldered part of #572 and body (Lever switch turned OFF)

	Cause	Action
⑨	Poor printed circuit	Replacement of printed circuit
	Disconnection of pink lead (#152)	Replacement of the lead #152
⑩	Poor contact of FRE brush	Replacement of the poor brush

Trouble shooting correspond to chart-3)

	Check point
(11)	Check lighting of LEDs, after making sure of no contact of soldered part of FRE printed sheet (#572) with body (Lever switch turned ON)
(12)	Check lighting of LEDs, after removing pink lead (#152) from soldered part of #572 to open the circuit
(13)	Measure the resistance between soldered part of FRE printed sheet (#572) and body, at ASA 100 and shutter speed 1/1000sec.

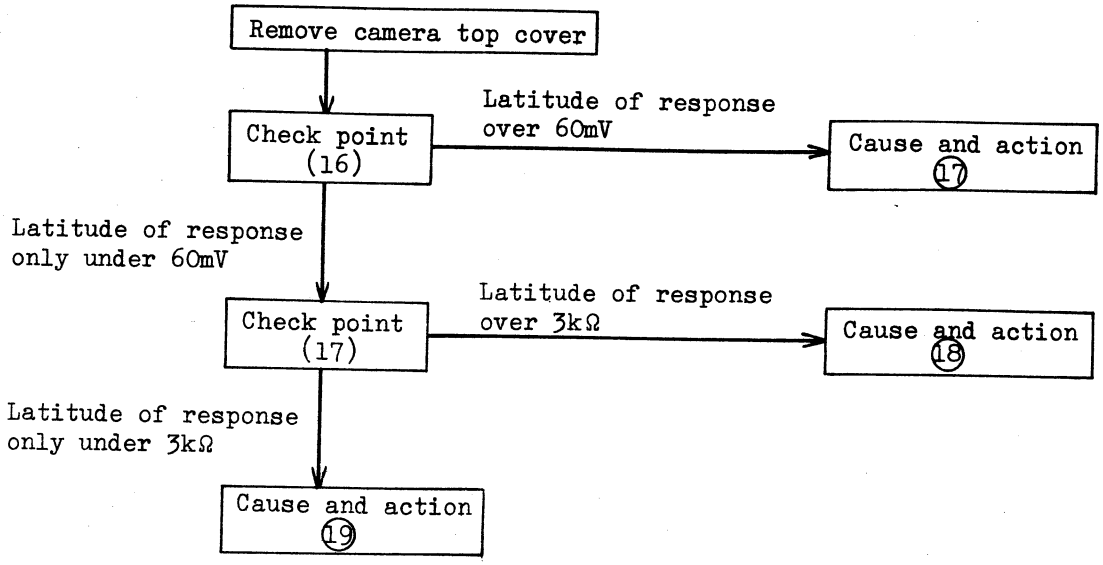
	Cause	Action
⑪	Contact of soldered part of #572 with body and with camera top cover	Remove such contact
⑫	Poor printed circuit	Replacement of printed circuit
	Contact of pink lead #152 with body, caused by peeling off the insulation	Remove such contact
⑬	Short of FRE to body	Improvement of short part of FRE

Trouble shooting correspond to chart-4)

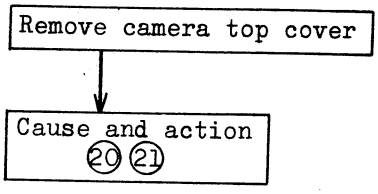
	Check point
(14)	Check that LEDs respond to the change of brightness
(15)	Check the conduction between camera body and top cover

	Cause	Action
⑭	Rising of FRE brush	Replacement of FRE
⑮	Poor printed circuit	Replacement of printed circuit
⑯	Poor printed circuit	Replacement of printed circuit
⑰	Insufficient shield effect	Make conduction perfect between body and top cover

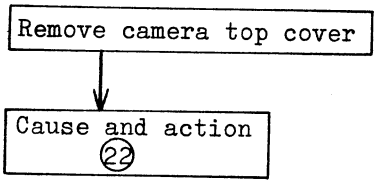
5). Even though exposure factors are fully altered, LEDs respond only to such an extent as ⊖→⊖◎ or ⊕→⊕◎



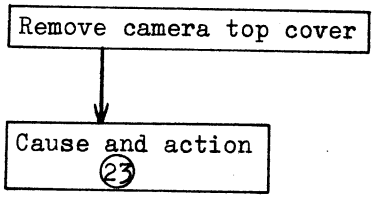
6). All of three LEDs remain lighted



7). Only one or two of three LEDs emit light



8). LEDs do not respond to the brightness in the normal sequence



Trouble shooting correspond to chart-5)

	Check point
(16)	Measure the voltage between pink lead (#152) and soldered part of FRE printed sheet (#572) by turning T-dial, at ASA 100, f/5.6
(17)	Measure the resistance between soldered part of FRE printed sheet (#572) and body by turning T-dial, at ASA 100, f/5.6

	Cause	Action
⑱	Poor printed circuit	Replacement of printed circuit
⑲	Poor printed circuit	Replacement of printed circuit
⑳	Incorrect resistance of FRE	Readjustment of FRE

Trouble shooting correspond to chart-6)

	Check point
	———

	Cause	Action
㉑	Solder bridge on LED lead or oscillation of IC, etc.	Replacement of printed circuit
㉒	Poor conduction between camera top cover and body	Make positive the conduction

Trouble shooting correspond to chart-7)

	Check point
	———

	Cause	Action
㉓	Poor LED or printed circuit	Replacement of printed circuit

Trouble shooting correspond to chart-8)

	Check point
	———

	Cause	Action
㉔	Poor printed circuit	Replacement of printed circuit

8. INSPECTION STANDARDS FOR REPAIRING

Item	Psition	Subject	Tool
Winding-up and shutter release	Wind-up lever	Wind-up torque: Within 1.5kg·cm (with no film), Within 4.5kg·cm (with film loaded)	Torque meter
	Spool	Torque of spool: 200—250g	Counter weight
	Sprocket	Slack of sprocket (at wind-up limit): Within 0.8mm at the top of tooth	(Manual)
	Wind-up coupling	Wind-up angle At start : -1°—+2° At wound-up: 132°—138°	Exclusive angle gauge
		Wind-up torque: Equal to that of wind-up lever, or less	Torque meter
	Rewind button	To be set in the position pushed 2.7mm from bottom cover surface	
	Rewind knob	Friction torque (with no film): 25—40g·cm	
	Shutter release button	Force required for releasing: 250—400g Stroke: 2.5±0.3mm (Releasing should be done, when the top surface of the button is pushed down over 0.4mm from that of cover ring	Micrometer for shutter button
	MD releasing shaft	Height of shaft from the surface of bottom cover : $0.7^{+0.3}_{-0.2}$mm	
		Force required for pushing shaft: Within 500g	Pressure gauge
		Stroke of releasing shaft (from the surface of bottom cover): 3.4mm or less	Height gauge
Shutter	Exposure time	Time allowance (ms)	Shutter tester

Speed (sec.)	Upper limit	Specified	Lower limit
1	1320	1000	755
1/2	660	500	377
1/4	330	250	188
1/8	165	125	94
1/15	82.5	62.5	47
1/30	41.25	31.25	23.5
1/60	20.62	15.63	11.7
1/125	12.1	7.81	5.05
1/250	6.06	3.81	2.52
1/500	3.03	1.95	1.26
1/1000	1.51	0.98	0.63

	Time difference in high speed	Difference of the exposure time between 1/500 and 1/1000sec. should be 0.35ms or longer (at the center of picture frame)
	Unevenness of exposure	Difference between max. and min. of exposure at the start, center and finish of picture should be 0.25EV or under (At speed 1/1000sec.)

Item	Position	Subject	Tool
Shutter (continued)	Shutter dial	Click torque: 600—900g·cm	(Manual)
	Curtain speed	First curtain: Within 7ms (at 1/125sec.) Second curtain: " " (")	Shutter tester
	Self-timer	Time of running: 8—14sec. After setting, if returned to the start position, it should be cancelled	Stop watch
	X-contact syncronization	Time lag: 0.3—0.8ms	
		Contact efficiency: 70% or more (Specified: 1ms)	Contact efficiency meter
		Insulation: 30MΩ or higher	Megger
Viewfinder	Infinity (∞) coincidence	Coincidence: ±30″ (with sprit prism) Out of focus in the four corners of viewfield should not remarkable	Tool lens and collimator
	Parallax	Parallax on picture plane: Within 0.5mm (In vertical and horizontal directions at the center of the field)	
	Viewfield-ratio	Vertical 93% or larger, horizontal 93% or larger, at the center of the field	
	Field frame	Inclination: Within 1° 30′ (As compared with chart)	
	Position of LED indicator	Center LED should be within the range shown a. The dimension shown b should not extend too far over. 	With the eye
	Position of T-figure	No missing, displacement and tilting of the figures and B are permissible. The edge of T-film should not enter too far the field frame. 	With the eye
	Position of F-figure	 No remarkable tilting of F-figure window respective to field frame is permitted.	With the eye

Item	Position	Subject	Tool
Exposure indication	ASA setting	ASA dial should be able to set to 12 at f/1.4 with Bulb and 3200 at f/22 with 1/1000sec.	With the hand
	Indication accuracy (with 50mm/1.4 lens and ASA100)	Brightness (Cd/m²) 2 | 8 | 64 | 256 | 4096 EV 4 | 6 | 9 | 11 | 15 f/ 2.8 | 2.8 | 4 | 4 | 8 T (shutter speed) 1/2 | 1/8 | 1/30 | 1/125 | 1/500	K = 1.6 Brightness-box Tool lens
		 Zone ①, Correct exposure point ±0.5EV Dead zone: 0.3—0.6EV Zone ②, Two-LED lighting range: 0.7—1.1EV Note: Correctness of the above EV ranges is judge by the change-over of lighting obtained by turning the aperture ring in the direction of the arrows.	With aperture ring
		Extingish voltage: 2.1—2.49V	
Lens mount	Aperture coupling lever	Height of the lever from camera center: After winding-up..... 3.1 ±0.1mm Before winding-up..... Within 3.5mm Difference between before and after winding-up..... 0.15mm or larger	Exclusive tool
		Stroke of the lever: 7.1mm or larger	
		Force for pushing the lever (at height 3.1mm): 90—120g	
	Aperture coupling ring	Rotating angle of coupling piece: 52.5°—112.5°	
		Rotation torque: In the direction of stopping-down, 0.400—750g·cm In reverse direction, 0.100—350g·cm	
	Metal back focus	Distance: 46.67 ±0.02mm(from outer rail)	
		Parallelism: 0.02mm	
		Level difference between out- and inside rail: 0.23 +0.02mm	
Camera back	Pressure plate	Flatness: Within 0.02mm
